
uniBBB – Unibody Aluminum Case for BeagleBone Black

PRODUCT ID: 1810

DESCRIPTION

While the UniBBB isn't made of Valyrian Steel (http://gameofthrones.wikia.com/wiki/Valyrian_steel) or Adamantium (<http://en.wikipedia.org/wiki/Adamantium>) or whatever your favorite fictional metal is, it's still the best and sleekest way to protect your precious Beagle Bone Black.

Made in the U.S.A. by Pazdan LLC Tool & Die from solid Aluminum, this case protects your BeagleBone from damage and looks great in your modern/designer apartment! Some nice bonus design features allow this case to be wall mounted or stackable (like a stack of tuna fish tins) so you can have Bones on Bones on Beagle. It also has enough room to fit our proto cape. (<https://www.adafruit.com/products/572>)

The BeagleBone Black case is milled on CNC machines and comes with two toppers. One has a punchout dot design which looks cool and keeps cool, the other has slots for connecting the beaglebone's GPIO headers.

Comes with the following:

- Aluminum Bottom Half of a Pi Case
- Topper with 'mesh' look
- Topper with cutouts for GPIO headers
- 4 Screws for attaching BeagleBone Black to case
- 2 Screws for wall mounting
- Large paperclip (to remove toppers)

This case works with the BeagleBone Black. **BeagleBone black computer not included!**
