USB DIY Connector – MicroB Female Plug

PRODUCT ID: 1829

DESCRIPTION −

As an addition to our other USB DIY shells, we have a 'micro B female' in a panel-mount-like connector. This isn't true panel mount but you could glue the black plastic shell into your project and then press-fit in the micro B connector. The 5-pins are much easier to solder than a surface mount connector

We have other DIY "USB shells" are available in USB A plug, micro B, mini B and USB A socket.

Each shell comes with a plastic shell and a proper connector with easy-to-solder tabs.
