# C4Labs Zebra Zero for Raspberry Pi Zero

PRODUCT ID: 3003

• Description

Wrap your new little Raspberry Pi Zero in protective and elegant wooden plates with the **Zebra Zero**!

A simple and versatile installation makes this case one of our favorites. The clever C4 nuts used to hold the case together can accept a screw from either end so if you want to install a PiHAT it can be secured to the nuts on the other side! A straight or right-angle GPIO header can be soldered in from either side of the board too.

We also have the Zebra Zero Plus which is a bigger case with a prototyping platform!

Pi not included!

Note: As of July 29th 2016, this enclosure now fits the Pi Zero v1.3! This is also compatible with the Pi Zero W!
