

Hook-up Wire Spool Set – 22AWG Stranded-Core – 6 x 25ft

PRODUCT ID: 3111

Description

This is a box of **six** 25ft spools of **stranded-core** wire. Stranded-core wire is best used for wiring jigs where there's bending or movement expected. It also works well with terminal blocks. It's *not* great for use with breadboards (without tinning). The wire is easy to solder to, and when bent it keeps its shape pretty well. We like to have a few spools of this stuff around which is why this set is quite nice! We suggest picking up some wire strippers to match. Wire gauge is **22 AWG**, which we've found is the best all-around gauge.

This set is not good for breadboarding! For breadboard use, check out the solid-core wire set

The box has a plastic dowel rod to hold the spools in place and let them spin, and there are little punch-outs you can pass the wire through so it'll stay nicely organized.

Technical Details

Box size: 5.75" long x 2" wide x 2.25" high

Weight of Set: 351g

External Insulation Diameter: 1.5mm / 0.06"

Weight per Spool: ~52g

Engineered in NYC Adafruit®
