

2.1mm DC Barrel Jack to 2nd Generation MagSafe Adapter

PRODUCT ID: 3547

Description

If you own a MacBook, you'll recognize this little friend. The premise of this **2.1mm DC Barrel Jack to 2nd Generation MagSafe Adapter** is simple. There's a MagSafe plug on one end and a 5.5mm/2.1mm DC barrel jack with center positive polarity on the other. This allows you to connect a 15-20VDC power supply to something that expects to connect to 2nd gen. MagSafe.

Since you can easily destroy hardware using this adapter, we really recommend it only for experts and people who fully understand what they're getting into by pushing arbitrary voltages into their fancy computers! Use a multimeter to probe the magjack pins to verify you've got the right voltages before plugging in into your computer.

We also offer a version with a 1st generation MagSafe plug.

There is no regulator or voltage protection in this adapter. If you plug in an incorrect power supply or wire it backwards, you could destroy your laptop - so be really careful!

Technical Details

Product Dimensions: 38.2mm x 21.7mm x 10.2mm / 1.5" x 0.9" x 0.4"

Product Weight: 8.0g / 0.3oz
