

Solder-free Stackable Banana Plugs 4mm - Pack of 5 Multi Color

PRODUCT ID: 3694

These Banana Plugs not only look great, they're also solder-free and stackable! Banana plugs are often used on test equipment, tools, synthesizers and other electronic patch panels. Each connector is designed with bowed strips to provide secure and uniform contact between the plug and jack. Even after multiple insertions, the non-collapsing design stays true to form. The plug springs are nickel-plated Beryllium copper and will last for many many years and insertions.

Each plug has a small machine screw, when opened from the top you can stick a solid core or stranded wire into the side of the plug and then screw it back down. Then you can stack as many as you like to create complex wiring kits. So they're great for any use.

Comes as a pack of 5, you get one of each lovely color. We also have panel-mountable Banana Jacks that go well with these plugs.

Technical Details

- Cable: 22AWG-14AWG
- Voltage: Up to 30V AC - 60V DC
- Current: Up to 15A
- Weight (single plug): 4.8g
