## Features

**IH technology delivers the ultimate soldering iron**  
**Excellent heat supply. Ideal for the most challenging soldering jobs.**

The FX-100 features IH (induction heater) that continuously powers the soldering iron and maintains the set temperature by automatically detecting even minute drops in temperature, plus HAKKO's proprietary "Power Assist" function.

The FX-100 achieves powerful thermal recovery even with fine-shaped tips. It provides excellent thermal responsiveness that conventional IH and sensor feedback systems cannot offer.

## Features of FX-889

### User-Friendly Design

#### ● Space-saving design

The reduced foot print is smaller than 2 of FX-888D and its iron holder. Efficient setup is available even on smaller workbench.

#### ● Power-saving design

Independent switches cut the power for each iron when not in use. Power-saving design minimizes standby electricity.

#### ● Superior operability

Four buttons were symmetrically placed at the both sides on the front panel. The two buttons on each side allow simple and intuitive operation.

A color band can be attached to the handle, and this makes it possible to see at a glance which side it is connected to. (2 pieces of color band are included as the standard accessories.)

#### ● Rich functions of iron holder

- Convenient pockets to stock soldering tips
- Three different ways for tip cleaning with provided cleaning tools
- Simple and easy cleaning of iron holder inside by removing holder base

### Handpiece Combination Examples

#### FM-203

Handpiece	Channel D connector	Channel S connector
FM-2027	○	○
FM-2022 <sup>*1</sup>	○	×
FM-2023 <sup>*1</sup>	○	×
FM-2024 <sup>*2</sup>	○	○
FM-2026 <sup>*3</sup>	○	○
FM-2032	○	○

<sup>\*1</sup> When FM-2022 or FM-2023 is connected to the channel D connector, both channel connectors can't be used at the same time.  
<sup>\*2</sup> When two FM-2024s are connected to the channel connectors, each FM-2024 must be connected to the desolder control box.  
<sup>\*3</sup> For FM-2026, each handpiece needs an N<sub>2</sub> generator (FX-780), flow meter (FX-791), compressor, regulator, etc. For further details, see the N<sub>2</sub> soldering system (P.32 & P.33).

#### FM-206

Handpiece	Receptacle 1	Receptacle 2	Receptacle 3
FM-2027	○	○	○
FM-2024	○ <sup>*1</sup>	○	○ <sup>*1</sup>
FM-2029	×	×	○
FM-2022	×	○	×
FM-2023	×	○	×
FM-2026	○	○	○
FM-2030	×	○	○
FM-2031	×	○ <sup>*2</sup>	○ <sup>*2</sup>
FM-2032	○	○	○

<sup>\*1</sup> FM-2024 can be connected to receptacle 2 and 3. However, only one FM-2024 can be used with the station.  
<sup>\*2</sup> For FM-2031 and FM-2026, each handpiece needs an N<sub>2</sub> generator (FX-780), flow meter (FX-791), compressor, regulator, etc. For further details, see the N<sub>2</sub> soldering system (P.32 & P.33).  
**NOTE:** FM-2024 and FM-2029 can't be used at the same time.

SELF FEEDER

V-Groove Maker

- Cutting a V-groove put on the solder surface reduces the splash of solder and flux.
- The solder feed amount can be controlled by turning the switch on and off.
- Compact, space-saving automatic solder feeder

Features

Minimize solder and flux splash

Cutting a V-groove on the solder surface enables the release of gas pressure generated by the flux, thereby suppressing splash. HAKKO 375 can cut a groove in only the solder needed, then helps to reduce the level of defectiveness.

Advantages of V-grooved solder

-Examination of solder and flux splash

Test criteria

Measurement method	Measure the amount of solder and flux splashing after solder is fed to the soldering iron
Temperature setting for soldering iron	350°C and 400°C
Solder	Lead-free (Sn-3Ag-0.5Cu) Halogen-free flux ø0.3 mm and ø1.0 mm
Solder feed length	50 mm

## Common Features of FR-810B and FR-811

### New user friendly functions for SMD rework

#### Pickup indicator

The indication comes up and the moment of picking up will be visible.

#### Vacuum pickup function

This can avoid an error to peel off the land by removing components with excessive force.

#### New type of nozzles

The new nozzles improve work efficiency with uniform heating (Only with BGA nozzles).

### Efficiency improvement

The high volume airflow and high output of FR-810B and FR-811 make it possible to perform the same work in only one-third of the time required when using a conventional model. This reduces the thermal impact on boards and components.

\* Examination of time taken for connector sections soldered onto a ceramic board to be heated to 200°C with maximum temperature and airflow settings selected. Single nozzles with an approximately 4 mm diameter were used.

### Quick-change N51 nozzles

### Simple heater replacement

## Common Features of FR-810B and FR-811

### Auto sleep and auto shutoff features

To ensure safety and conserve power, when the handpiece is placed in the handpiece holder, the auto sleep function is activated and it starts cooling automatically.  
If the handpiece has not been removed from the handpiece holder (Example: Using it in a rework fixture) and after it has been idle for 30 minutes, auto shutoff function is activated. It is automatically powered off.  
Access to settings can be restricted via the password function for easy management.

Handpiece holder No.B5048 in the picture can be attached to FR-811 as well (option).

### Preset mode

### Chain presets function for making a simple thermal profile

The chain presets function is to make a simple thermal profile by combining several preset conditions (Up to 5 steps).

\* Presets 4 and 5 have been set to "000", so they are skipped.

## Features of FR-811

Interface designed for intuitive operation. Possible to link to a PC.

Easy-to-read LCD

Easy-to-operate multi-direction control knob

A USB device terminal for easy data transfer

Link to a PC (A USB I/F terminal available)

**The functions needed for SMD rework are in a compact body.**

**Possible to make full-scale thermal profiles with 6-zone hot air and a bottom heater**

A basic thermal profile is composed of the 5 parts shown below. FR-811 can provide 6 zones in which temperature, time, and air flow are controlled. Therefore FR-811 can make a full-scale thermal profile which is close to reflow profiles made by a reflow oven.

### Operation on a PC for various settings

By connecting FR-811 and a computer with a USB cable and using the dedicated software which comes as standard, a set thermal profile and actual temperature change can be shown in a graph in real time. The set values and graph can be saved in csv format.

### Record thermal data

By connecting a thermocouple included with FR-811, the temperature of the component or circuit board can be measured and recorded. In addition, if "TC LINK" is set, the heater output can be automatically controlled so that the temperature of the thermocouple attached to the component or circuit board follows the set profile.

### Linked operation with the bottom heater

FR-811 can control on/off timing and output of the bottom heater which is available optionally.

## Common Features of FR-810B and FR-811

### Assembly of a low-cost SMD rework system

A low cost rework system can be assembled with a bottom heater, a grip fixture, and a board holder.

\* The following pictures are set-up examples.

## Option

### Grip Fixture L

A board holder can be easily attached to the large baseplate.

### Grip Fixture M

Recommended if a bottom heater is not required or in case of use of a bottom heater other than the dedicated model for FR-811.

### The dedicated bottom heater for FR-811

Equipped with carbon heaters. Heating area is divided into 2 sections.

### Board Holder

Makes it easy to set and remove a PWB and to make fine adjustments after setting.

### Board Clip

Accepts even irregular-shaped PWB.

### Board Support Unit

Supports PWB from underneath to minimize its warping.

## Features

### An Innovation in Tip Temperature Control

#### Flow chart of management

1. Scan the unit and the measurer's ID by a barcode reader.
2. Measure the temperature.
3. Press the REC button to save the data on the unit main body.
4. Transfer and save the data on the PC.

### Free of errors in temperature measurement by standardization of temperature measurement

The unit has a function to notify the end of measurement. When measurement is finished, "H" icon stops blinking. The unit can find measurement errors and prompt an operator to repeat measurement. The display shows "Fail" if tip loses appropriate contact with sensor before completion of measurement.

#### Pass/Fail judgment on measured temperature

Pass/Fail judgment on measured temperature can be automatically made if an acceptable temperature range is registered in advance (The display shows "OK" or "Fail").

### Make it easy to manage tip temperature records by transferring the data to computer

THERMOMETER

### Soldering Iron Thermometer

- Tip thermometer that provides reliable temperature control of soldering iron tips
- Compact design minimizes your workspace and enables you to easily carry it around.
- Incorporating an extremely fine sensor that has high temperature reactivity.

## HAKO FG-101

SOLDERING TESTER

### Soldering Iron Tester

- Tip temperature, leak voltage, and tip-to-ground resistance can be easily measured with high accuracy.
- Soldering iron tester useful for daily maintenance of station-type soldering irons

#### What is leak voltage and tip-to-ground resistance?

##### Leak voltage

Leak current is the current that leaks from the tip to a board or device. Leak voltage is a specific measurement of the level of this current.

The leakage can adversely affect delicate devices, so it is necessary to check leak voltage on a daily basis.

##### Tip-to-ground resistance

Most leak current flows from the tip via the ground wire to the outlet ground terminal, and is prevented from affecting the device. Because of this, tip-to-ground resistance is another important issue that must be checked daily.

## Common Features of FG-100 and FG-101

### Dimensional measurement

\*Design image only

### MAX HOLD function

When the “MAX HOLD” button is pressed, “MAX HOLD” is displayed and the highest tip temperature is held on the display.

## Procedure for Measuring the Soldering Tip Temperature

- Typical measuring point for Shape B, I and D (Measure at the center of the tin coated area)

- Typical measuring point for Shape BC and C which are tinned flat only.
