Amphenol-Tuchel Electronics GmbH

Smart Card Connectors Series C 700

Security information

It is the user's responsibility to check whether the components illustrated in this catalogue comply with different regulations from those stated in special fields of application which we are unable to foresee.

These connectors are designed and produced in conformity with the low-voltage directive (72/73/EWG) respectively Gerätesicherheitsgesetz (German Law). We reserve the right to change the design due to improvement in quality, development or production requirements.

This catalogue must not be used in any form or manner without our prior approval in writing (Copyright Law, Fair Trading Law, Civil Code).

IP degree of protection for all Smart Card Connectors is IP 00, if not mentioned otherwise in technical data.

As far as Smart Card Connectors are mentioned without protection against electric shock, only Safety Extra Low Voltage (SELF) of AC 25 V_{eff} or DC 50 V is permissible. When mounted with protection against electric shock see table rated voltage acc. to IEC 60664-1.

The products specified in this catalogue have been developed for soldering proceedings with Sn Pb alloys. Other soldering proceedings are possible upon request.

Basically Smart Card Connectors are designed for indoor and outdoor applications with low dirt/dust contamination and environmental influences.

Connectors and/or plug and socket devices may only be used according to the specified technical ratings. Please note that technical ratings represent often only initial values which have been investigated under determined conditions (tests) and may change under longer or stress conditions.

The referred IEC-Standards correspond to the DIN EN-Standards.

Worldwide Performance

The Company

Amphenol-Tuchel Electronics GmbH is a global company and leading manufacturer of electrical connector solutions.

The superior quality of our product line is a result of specialized engineering and techniques in conjunction with leading edge production methods.

Our worldwide production and sales channels provide local competency in a global marketplace. Amphenol has set standards in electrical connector technology with our many inventions and patents.

These solutions are reflected in product applications used by the industrial machine tool, automotive, telecom as well as datacom markets.

Quality

Quality stands not only for product quality but also for the quality of the connection solution. At Amphenol-Tuchel Electronics, quality is one of the first considerations during the initial development steps. The emphasis is not on the product, but on the existing requirements. Engineers with many years of experience work in interdisciplinary project teams to develop and supply absolutely reliable connection solutions.

Amphenol-Tuchel is certified in accordance with ISO 9001, QS 9000 and VDA 6.1, which means that not only the organizational prerequisites for compliance with the required product quality exist, but that they are actually applied throughout the process chain.

It goes without saying that all Smart Card connectors of the Amphenol product range meet the specified product characteristics. The various electrical, climatic and mechanical parameters are examined and tested in comprehensive inspections.

Technological Leadership

Amphenol-Tuchel Electronics derives its claims to technical advances and technological leadership from various technical and technological advantages.

These include high-performance precision pressing technology, modern injection-molding technology and a manufacturing and inspection technology which ensures that all processes operate reliably.

Production flexibility is guaranteed by the use of either fully automatic production equipment, semi-automatic production lines or manual manufacture, depending on the requirements.

Samples can be produced in a very short time and it is also possible to execute the entire production cycle from the prototype to the finished product quickly. Customer-specific prototypes and small batches can also be produced quickly.

The experience and competence gained through many decades of work are displayed today in the wide range of proven products in the sectors of plug and socket connectors and Smart Card Connectors.

An innovative internal product development department, a flexible, selective network of suppliers, coupled with an internal laboratory for support of research and product development, together with 3D-CAD and simulation work stations adds up to a company which can be measured by its own standards.

C700 Smart Card Connectors: General Information

Chip Cards

Chip Cards, Smart Cards, IC Cards or whatever application specific term is used ... have one thing in common:

- the outside dimensions, standardized acc. to ISO 7810, the size of a common credit card
- and the position of the contact pads, (which connect the embedded IC chip) are fixed according to ISO 7816.

The most used chip contacts are:

Type ID-1, Chip middle position (ISO)

Type ID-1, Chip outer position (AFNOR)

SIM/SAM-Card, ID-000, GSM 11.11

MultiMediaCard, acc. to MMCA - Spezifikation

Secure Digital Memory Card, acc. to SDA - Spezifikation

Amphenol Smart Card Connectors

Smart Card Connectors are integral components of a smart card reader or terminal, and provide electrical contact to the smart card's pads. The connector is not a stand alone peripheral device.

An additional interface circuit is necessary to be able to read and write to the smart card whether a smart card is a memory only or a microprocessor card. Amphenol Smart Card Connectors are designed to make secure contact to all cards designed according to ISO 7816 and thus ensure a reliable data transmission.

The communication with the chip card can begin when the card is fully inserted and the data contacts are all connected. At this point an integral card presence switch is activated and signals to the connected circuitry that the card is ready to be read and written to.

Smart Card Connectors for payment systems according to EMV (Europay Mastercard Visa / Integrated Circuit Card Specification for Payment Systems) have a specific card end position switch which detects the insertion and removal of a Smart Card.

C700 Smart Card Connectors: General Information

Card Handling Systems

Push-Only

The card is inserted manually and held in the active position by hand. The card is ejected immediately after the user releases it. The Push-Only is ideally suited for applications with short transaction cycles, ie. door access control.

Push-Pull

The card is inserted manually and held in the active position by a card brake. After completion of the transaction, the card is simply pulled out of the Smart Card Connector.

This is the most common manual card handling system.

Push-Push

The card is inserted manually and held in the active position by the Smart Card Connector. When pushed again the card is returned to the user (principle of a ballpoint pen).

PUSHMATIC®

This semi-automatic system combines a manual card insertion with an automatic card ejection. The card is manually pushed into the Smart Card Connector until it is flush (or nearly flush) with the bezel. Upon completion of the transaction, software triggers a solenoid and the card is ejected back to the user.

Contact Methods

Landing Contacts

With this contact method a moveable contact set will connect with the pads of the chip card upon insertion of the card.

The card plastic surface is not scratched and high mating cycles can be achieved.

Wiping Contacts

The contact set is fixed. When the card is inserted, it wipes over the data contacts until they arrive at the card pads. Depending upon the card surface, wiping traces which do not influence the card function can occur after some insertion cycles.

The advantage of wiping contacts is that they clean the contact point with every mating cycle.

Landing Card

This method of contacting is based on a fixed contact set. The chip card is lowered during its insertion.

The contact areas of the chip card land smoothly on the reading contacts which results in the possibility of a high number of mating cycles.

In addition this system makes sure that with each insertion the contact surfaces are cleaned.

SIMLOCK®

In cases where chip cards with the dimensions of a full size ISO 7816 are too large, the SIMLOCK® comes into use. With its latching cover for the insertion of the smaller SIM card it offers a safe contact interface even in mobile usage.

Due to the locking system the user does not have to consider tolerances or card guiding.

The design and packaging of the Amphenol SIMLOCK® allows manual and automatic pick and placement prior to surface mount soldering.

SIMBLOCK®

These Smart Card Connectors, due to their minimal space requirement and low height are the ideal components for many space restricted applications, from handsets to the electronic purse. The connector is suitable for standard chip cards per ISO 7816 as well as for plug-in SIM cards.

The SMT terminals and packaging for automatic handling allow the use of pick and place robots and modern surface solder technologies.

Positioning and support of the chip card has to be ensured by the user.

The Standard Style is our original first generation product family featuring landing contacts for rugged applications such as: Point of Sale systems, vending equipment and access control.

Design features

- high numbers of card insertion cycles, due to the principle of landing and self-cleaning contacts
- designed for harsh applications and environments
- modular system with several operating methods from manual handling to automatic card ejection
- various termination options: flat cable in standard and custom lengths with sockets according to IEC 60 603-13; and flexprints. For appropriate flexprint connectors see page 29
- Accessories: Shutter and bezel, mounting plate

Assembly instructions:
Please make sure that interface cables are unrestricted and free to move after assembly.

In addition to the features of the PUSHMATIC® , this version offers an additional switch, which indicates the complete insertion of the card and the locking of the contact set.

The shutter protects the card slot if no card is inserted and will only open upon insertion of a standard size card. The insertion of coins, paper, clips, etc... is not possible. An additional bezel is not required.

PUSHMATIC® II

While smaller in size than our standard PUSHMATIC®, the PUSHMATIC® II provides additional performance and “anti-vandal” features. With this added functionality the PUSHMATIC® II meets requirements of new and future applications for unattended terminals used in payment and security system applications.

Design features

- miniaturized style, suitable for mobile interface devices
- card accessible during power failure
- card locked in active position (option; see ordering table)
- card presence switch, also can be used for system wake up
- card end position switch acc. to EMV acts as card locking sensor
- additional sensor for card active position detects abnormal termination of the transaction
- self retracting and self cleaning data contacts provide protection against vandalism
- housing bottom features a large debris slot allowing the egress of coins, paper, as well as cut in half cards
- 16 way interface header allows for custom cabling

Assembly instructions:

PUSHMATIC® II mounting devices and card guide are provided to guarantee appropriate assembly.

Accessories are shown on the following pages. PUSHMATIC® II can be used with mounting adaptor and bezels if required by customer design.

Smart Card Connectors

Low Profile PUSHMATIC®

Series C702C

Low Profile PUSHMATIC®

The Smart Card Connector offers a super low profile height to enable the PUSHMATIC®-function also in such places where installation conditions are restricted in size. Main applications are handheld devices and new generations of POS terminals.

Design features

- miniature low profile size
- landing and self-cleaning contact design
- card locking in active position
- card presence switch (normally open) acc. to EMV
- micro switch as locking sensor
- automatic card eject after transaction
- termination to application with flexible pcb
- 2 way solenoid wire including 2.54 mm socket
- manual unlocking after power failure possible
- housing bottom removable to remove foreign debris i.e. coins (optional)

Assembly instructions:

For correct assembly please refer to the instructions on the next page. Please make sure that flexprints remain free and unrestricted after assembly.

Superflat Style Smart Card Connector

is a Push-Pull Series of 2nd generation connectors with landing contacts providing a high degree of miniaturization. Suitable applications include: point-of-sales systems, mobile devices, access control, keyboards, etc.

Design features

- miniature size ideally suited for mobile devices
- additional space saving possible by integration of base into customer housing
- Versions acc. to EMV (see page 6)
- dip solder version available featuring snap-in mounting, chip side up card insertion, and a debris slot to provide egress of coins, paper, etc.
- snap-in version also available with flexprint termination (both SMT and PCB)

PCB Mount Wiping Contact Smart Card Connectors

Typical applications for Smart Card Connectors with wiping contacts and PCB mounting are set top boxes, toll road transponders, parking meters, utility metering systems, etc., where limited numbers of mating cycles are specified.

Design features

- Termination: dip solder pins or SMT
- self-cleaning card presence switch on most models detecting final card position
- special shape of wiping contacts minimize card scratching and wear
- Versions acc. to EMV (see page 6)
- dual plane version with 2 x 8 contacts for chip up & down card handling, suitable for applications with short dwell time of the card

Assembly instructions:

Soldering conditions

- wave soldering: 260 °C; 10 s max.
- infrared reflow 230 °C; 30 s max. (SMT versions only)

Smart Card Connectors

with landing card PCB Mount

Series C702F

The Smart Card Connector with landing card. Typical applications are Point-of-Sale systems, mobile devices, access control etc.

Design features

- high number of mating cycles due to minimized wiping distance on card contacts
- contact self-cleaning effect
- short card insertion depth

Assembly instructions:

For the provided Philip's head screws, a power driven screw driver (500-600 r/rpm; 0.25 Nm max.) is recommended.

Soldering conditions

Wave soldering: 260 °C, 10 s max.

Smart Card Connectors

Hybrid Reader

Series C703A

Hybrid Reader

The manual Hybrid Reader accepts both ISO 7810 magstripe cards and ISO 7816 chip cards in the same slot. Push-pull card handling allows reading of the magnetic stripe on the way in or out, and reading/writing of the chip card when the card is fully inserted. Standard product features a dual head contact set (ISO & AFNOR) and track 2, 1 + 2 or 2 + 3 reading options available for the magnetic head. The head is suspended by a unique gimballed (cardanian) system that assures accurate data transfer. The reader features a decoder circuit for each track and an 18 pin interface connector.

Usable Cards

Magstripe cards

ISO 7810, 7811, 7812; LOCO and HICO.

The magstripe will be read 100% during insertion and extraction of the card.

Chipcards

ISO 7816. Contact positions ISO, AFNOR and ISO & AFNOR can be read and written to.

Embossed cards acc. to ISO 7811, part 3 are accepted.

Assembly instructions:

The Smart Card Connector data contacts are connected to a pin header. F2F decoding of magstripe signal is done on a system board while data and clock signal are available separately. Card Detector 1 (CD1) detects the movement over the maghead and is low active until 50 ms after last clock signal of magtracks. Card Detector 2 (CD2) detects card active position. Data and clock signal of magtracks as well as CD1 and CD2 are TTL/CMOS compatible. This hybrid reader is intended for integration into electronic equipment and systems. When integrated, the EMC requirements of the respective equipment or system acc. to EMC guidelines 89 / 336 EWG shall be followed.

C703A Hybrid Reader

PIN-No.	Contact assignment	Remarks	PIN-No.	Contact assignment	Remarks
PIN 1	C1	Chipcard contacts (direct circuit)	PIN 10	Card Detector 2	Chip card can be activated (safety contact closed)
PIN 2	C2	Chipcard contacts (direct circuit)	PIN 11	+5 V	–
PIN 3	C3	Chipcard contacts (direct circuit)	PIN 12	–	–
PIN 4	C4	Chipcard contacts (direct circuit)	PIN 13	Data Track 1	–
PIN 5	C5 = Ground	Chipcard contacts (direct circuit)	PIN 14	Clock Track 1	–
PIN 6	C6	Chipcard contacts (direct circuit)	PIN 15	Data Track 2	–
PIN 7	C7	Chipcard contacts (direct circuit)	PIN 16	Clock Track 2	–
PIN 8	C8	Chipcard contacts (direct circuit)	PIN 17	Data Track 3	–
PIN 9	Card Detector 1	Magstripe is now being read	PIN 18	Clock Track 3	–

The 2 Track Magstripe readers have PIN 13 + 14 dedicated with Track 1 or 3. Track 2 is PIN 15 + 16. PINs 17 + 18 are not connected. All digital signals of the Magstripe readers are TTL low active.

C703A Technical Data

Electrical Characteristics	Standard	Value
Contact resistance without cable or flexprint	IEC 60512-2, Test 2a	Data contacts $\leq 30 \text{ m}\Omega$ Switch contacts $\leq 40 \text{ m}\Omega$

Disk Drive Slot
5 1/4" Page 45

- Disk Drive Slot Smart Card Connectors**
for spare disk drive slots in PCs are a combination of:
- a Smart Card Connector (C702A) with Push-Pull card handling mounted on a 3.5 inch or 5.25 inch disk drive frame (tan color: RAL 7032) with a bicolor LED (red/green)
 - 14 way flat cable with a socket connector according to IEC 60603-13; two cable lengths are available for desktop and tower housings
 - mounting screws

Versions without LED or with other Smart Card Connectors are available upon request.

Assembly instructions:
Please make sure that interface cables are unrestricted and free to move after assembly.

SIMLOCK®

designed for SIM/SAM card applications.

Design features

- size: same footprint as SIM card
- reliable function in locked state during mobile use
- designer does not have to be concerned with housing tolerances and card guiding due to self contained system
- polarization notch does not allow incorrect card positioning
- SIMLOCK® with locking detector (or card presence switch) available
- suitable for automatic assembly processes (Pick & Place, Tape & Reel and Reflow)
- contact carrier and lid can be delivered separately upon request
- custom geometries and layout designs possible

For your special requirements please contact Amphenol-Tuchel Electronics GmbH (see back page).

Assembly instructions:

Versions with locking detector lid must be unlocked during reflow process or lid can be packaged separately and snapped in place after reflow.

Soldering conditions:

Infrared reflow: 245°C; 10 s max.

SIMBLOCK®

Due to miniature size, SIMBLOCK® is suitable for mobile applications from handsets to e-purses.

Design features

- contacts chip cards according to ISO 7816 and Plug-In SIM-Cards
- suitable for automatic assembly processes (packaging designed for Pick & Place process and Reflow)
- low height (2 mm standard)
- high co-planarity accuracy
- SMT-Version with 6 contacts especially designed for GSM 11.11 interfaces
- solderfree versions with float contacts for PCB mount
- versions with spoon contacts available for any operation direction of the chip card

Assembly instructions:

For reliable function make sure that card is positioned and supported as shown on drawing.

C707B Technical Data

Electrical Characteristics	Standard	Value
Contact resistance	IEC 60512-2, Test 2a	Data contacts $\leq 30 \text{ m}\Omega$ Data contacts U-form: $\leq 100 \text{ m}\Omega$ Switch contacts $\leq 50 \text{ m}\Omega$
Insulation resistance	IEC 60512-2, Test 3a	$\geq 10^9 \Omega$
High voltage resistance	IEC 60512-2, Test 4a	500 V _{AC} ; 1 min

Climatical Characteristics

Climatic category	IEC 60068-1	40 / 85 / 21
Operating temperature		- 40 °C ... + 85 °C
Storage temperature		- 40 °C ... + 85 °C

Mechanical Characteristics

Mechanical lifetime	IEC 60512-5, Test 9a	10,000 mating cycles
Vibration	IEC 60512-4, Test 6d	f = 10 ... 60 Hz 0.7 mm DA f = 60 ... 500 Hz a = 5 g 2 h / axis
Shock, without disconnection	IEC 60512-4, Test 6c	$\leq 40 \text{ g}$; 6 ms; halfsine 10 shocks / direction in 3 axis
Shock, without destruction	IEC 60512-4, Test 6c	500 g; 1 ms; halfsine 2 shocks / direction in 3 axis
Contact force		20 ... 50 cN

Switch

Card presence switch		normally open/normally closed
Chattering time		$\leq 5 \text{ ms}$

MultiMediaCard Connector

Series C709A

The MultiMediaCard Connector (MMC) and the Secure Digital Memory Card Connector* (SD Card) are designed for attaching, fixing and electrically interconnecting the card to the system board. Most suitable applications are:

- Telecommunication
- Audio
- Video
- PC
- Consoles (video games etc.)
- Navigation
- Automotive
- Industry
- MP3 player

Design features

- minimized co-planarity tolerances due to advanced terminal design
- on board space saving due to termination geometry
- holes for mechanical and electrical contact tests
- customized fastening
- acc. to MMCA specification

For realization of your custom requirements please use the Smart Card Connector competence and experience of our design engineers.

*) without picture

C709A MultiMediaCard Connector

Description	Part No.
MultiMediaCard Connector	C709 10A007 100 1
Other designs and Secure Digital Card Connectors upon request.

C709A Technical Data

Electrical Characteristics	Standard	Value
Contact resistance	IEC 60512-2, Test 2a	$\leq 30 \text{ m}\Omega$
Insulation resistance	IEC 60512-2, Test 3a	$\geq 10^9 \Omega$
High voltage resistance	IEC 60512-2, Test 4a	500 V

Climatical Characteristics

Climatical category	IEC 60068-1	25 / 85 / 21
Operating temperature		- 25 °C ... + 85 °C
Storage temperature		- 40 °C ... + 90 °C

Mechanical Characteristics

Card insertion force	IEC 60512-7, Test 13b	max. 40 N
Card extraction force	IEC 60512-7, Test 13b	> 1 N
Mechanical lifetime		10,000 mating cycles
Random vibration	IEC 60512-6, Test 6e	f = 10 Hz ... 2 kHz a = 6 g RMS 15 min / axis
Shock, without disconnection	IEC 60512-4, Test 6c	40 g; 11 ms 100 shocks / direction in 3 axis
Shock, without destruction	IEC 60512-4, Test 6c	500 g; 1 ms 3 shocks / direction in 3 axis
Contact force		20 ... 60 cN
No. of contacts		7
Contacts	Wiping contacts with 2 premating contacts	
Termination	SMT	
Mounting style	upon customer request
