HLMP-Cx08 Series, HLMP-Cx25 Series HLMP-Cx27 Series, HLMP-C610

T-1³/₄ (5 mm) AllnGaP Lamps

Data Sheet

Description

Device Selection

The HLMP-Cx08, HLMP-Cx25, HLMP-Cx27, and HLMP-C610 series are 5 mm lamps specially designed for applications requir-ing very high on-axis intensity that is not achievable with a standard lamp. These devices are capable of producing light output over a wide range of drive currents.

Built using AlInGaP technology, they are well suited for typical 5 mm TS-AlGaAs lamp applica-tions, and have significantly SUPERIOR RELIABILITY than most TS-AlGaAs lamps in wet/hot environments. These lamps come with clear non-diffused lens and are optically designed to yield superior light output.

Features

- High intensity
- General purpose leads
- Popular 5 mm diameter
- Available in bulk, tape and reel, or ammopack
- 8° or 25° viewing angles
- Choice of colors: Amber or Red

Applications

- Indoor/outdoor applications
- Small store-front signs
- Message panels
- Road construction barrier lights
- Center high mount stop lights
- Spoiler, car decorative lighting
- Motorcycle/bicycle warning lights

		Typical Viewing Angle ^[1] (degrees),	wing Luminous Intensity, egrees), Iv (mcd) @ 20 mA			Dominant
Part Number	Standoff	2θ _{1/2}	Min.	Тур.	Color	Wavelength ^[2]
HLMP-C008-U00xx	No	8	2900	6000	Red	626
HLMP-C208-S00xx		8	2600	3000	Amber	590
HLMP-C608-R00xx		8	1000	2000	Red	635
HLMP-C610-R00xx	Yes	8	1000	2000	Red	635
HLMP-C025-P00xx	No	25	500	1000	Red	626
HLMP-C225-O00xx		25	450	800	Amber	590
HLMP-C625-P00xx		25	500	700	Red	635
HLMP-C027-P00xx	Yes	25	500	1000	Red	626
HLMP-C627-P00xx		25	500	700	Red	635
HLMP-C325-P00xx	No	25	500		Orange	605

Notes:

1. $\theta^1\!/_2$ is the off-axis angle at which the luminous intensity is half of the axial luminous intensity.

2. The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

Package Dimensions

HLMP-C610

HLMP-Cx08

Part Numbering System

Absolute Maximum Ratings at $T_A = 25^{\circ}C$

Parameter	Absolute Maximum	Units
Peak Forward Current	70	mA
Average Forward Current ^[1]	30	mA
DC Current ^[2]	50	mA
Reverse Voltage ($I_R = 100 \ \mu A$)	5	V
LED Junction Temperature	110	°C
Operating Temperature Range	-40 to +100	°C
Storage Temperature Range	-40 to +100	°C

Notes:

1. See Figure 2 to establish pulsed operating conditions.

2. Derate linearly from 50° C at 0.5 mA/° C.

3. The transient peak current is the maximum non-recurring peak current that can be applied to the device without damaging the LED die and wirebond. It is not recommended that this device be operated at peak currents above the Absolute Maximum Peak Forward Current.

Optical/Electrical Characteristics at T_A=25°C

Symbol	Parameter	Device	Min.	Typ. ^[3]	Max.	Units	Test Conditions
20 ¹ /2	Included Angle Between Half	HLMP-C008		8		Deg.	I _F = 20 mA
	Luminous Intensity Points ^[1]	HLMP-C208		8			See Note 1
		HLMP-C608		8			
		HLMP-C025		25			
		HLMP-C225		25			
		HLMP-C325		25			
		HLMP-C625		25			
		HLMP-C610		8			
		HLMP-C027		25			
		HLMP-C627		25			
λd	Dominant Wavelength ^[2]	HLMP-C008		626		nm	See Note 2
		HLMP-C208		590			
		HLMP-C608		635			
		HLMP-C025		626

Figure 4. Relative luminous intensity vs. forward current.

Figure 5. Maximum forward DC current vs. ambient temperature.

Soldering/Cleaning

Cleaning agents from the ketone family (acetone, methyl ethyl ketone, etc.) and from the chlorinated hydrocarbon family (methylene chloride, trichloro-ethylene, carbon tetrachloride, etc.) are not recommended for cleaning LED parts. All of these various solvents attack or dissolve the encapsulating epoxies used to form the package of plastic LED parts.

For information on soldering LEDs, please refer to Application Note 1027.

Intensity Bin Limits

Color Categorie	S
------------------------	---

		Intensity Range (mcd)		
Color	Bin	Min.	Max.	
Res/Orange	Р	540.0	850.0	
	Q	850.0	1200.0	
	R	1200.0	1700.0	
	S	1700.0	2400.0	
	Т	2400.0	3400.0	
	U	3400.0	4900.0	
	V	4900.0	7100.0	
	W	7100.0	10200.0	
	Х	10200.0	14800.0	
	Y	14800.0	21400.0	
	Z	21400.0	30900.0	
Yellow	0	510.0	800.0	
	Р	800.0	1250.0	
	Q	1250.0	1800.0	
	R	1800.0	2900.0	
	S	2900.0	4700.0	
	Т	4700.0	7200.0	
	U	7200.0	11700.0	
	V	11700.0	18000.0	
	W	18000.0	27000.0	

		Lambda (nm)
Color	Category#	Min.	Max.
Orange	2	599	602.5
	3	601.5	605
	4	603.8	608.2
	5	606.8	611.2

Tolerance for each bin limit is ± 0.5 nm.

Maximum tolerance for each bin limit is $\pm 18\%$.

Mechanical Option Matrix

Mechanical Option Code	Definition
00	Bulk Packaging, minimum increment 500 pcs/bag
02	Tape & Reel, straight leads, minimum increment 1300 pcs/bag
DD	Ammo Pack, straight leads with minimum increment 2K/pack

Note:

All categories are established for classification of products. Products may not be available in all categories. Please contact your local Avago representative for further clarification/information.

Precautions:

Lead Forming

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- If lead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED to length after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

Soldering Conditions

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering conditions:

	Wave Soldering	Manual Solder Dipping
Pre-heat Temperature	105°C Max.	-
Pre-heat Time	30 sec Max.	-
Peak Temperature	250°C Max.	260°C Max.
Dwell Time	3 sec Max.	5 sec Max.

- Wave soldering parameter must be set and maintained according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C, before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through hole sizes for LED component leads:

LED Component Lead Size	Diagonal	Plated Through Hole Diameter
0.457 x 0.457 mm	0.646 mm	0.976 to 1.078 mm
(0.018 x 0.018 inch)	(0.025 inch)	(0.038 to 0.042 inch)
0.508 x 0.508 mm	0.718 mm	1.049 to 1.150 mm
(0.020 x 0.020 inch)	(0.028 inch)	(0.041 to 0.045 inch)

Note: Refer to application note AN1027 for more information on soldering LED components.

Figure 8. Recommended wave soldering profile.
