# Agilent HLMP-LD16/HLMP-MD16 4 mm Precision Optical Performance **Red Oval LEDs**

Data Sheet

### Description

These Precision Optical Performance Oval LEDs are specifically designed for Full Color/Video and Passenger Information signs. The oval shaped radiation pattern ( $50^{\circ} \ge 100^{\circ}$ ) and high luminous intensity ensure that these devices are excellent for wide field of view outdoor applications where a wide viewing angle and readability in sunlight are essential. These lamps have very smooth, matched radiation patterns ensuring consistent color mixing in full color applications, message uniformity across the viewing angle of the sign.

High efficiency LED materials are used in these lamps: Aluminum Indium Gallium Phosphide (AlInGaP) for Red color. The higher performance AlInGaP II is used. Each lamp is made with an advanced optical grade epoxy offering superior high temperature and high moisture resistance in outdoor applications. The package epoxy contains both UV-a and UV-b inhibitors to reduce the effects of long term exposure to direct sunlight.

Designers can select parallel (where the axis of the leads is parallel to the wide axis of the oval radiation pattern) or perpendicular orientation. Both of the lamps are red diffused-tinted.

#### Features

- High brightness material AlInGaP 630 mm Red
- Viewing angles: major axis  $100^{\circ}$ minor axis  $50^{\circ}$
- Well defined spatial radiation pattern
- Superior resistance to moisture

### **Applications**

- Commercial outdoor advertising
- Full color signs

## **Device Selection Guide AllnGaP2**

#### Notes:

1. The luminous intensity is measured on the mechanical axis of the lamp package.

2. The optical axis is closely aligned with the package mechanical axis.

3. The dominant wavelength,  $\lambda_d$ , is derived from the CIE Chromaticity Diagram and represents the color of the lamp.

## **Package Dimensions**

Notes:

Dimensions in millimeters (inches).
Tolerance ± 0.1 mm unless otherwise noted.

# Part Numbering System HLMP $-x \times x \times - x \times x \times x$

# **Absolute Maximum Ratings** $T_A = 25^{\circ}C$

Notes:

1. For option -xxTxx, maximum forward voltage,  $V_{\text{F}}\,\text{is}$  2.6V.

2. 2θ<sub>1/2</sub> is the off-axis angle where the luminous intensity is 1/2 the on-axis intensity.
3. The radiant intensity, l<sub>e</sub> in watts per steradian, may be found from the equation l<sub>e</sub> = l<sub>v</sub>/η<sub>v</sub> where l<sub>v</sub> is the luminous intensity in candelas and η<sub>v</sub> is the luminous efficacy in lumens/watt.

# **Intensity Bin Limits**

### (mcd at 20 mA)

| Bin Name | Min. | Max. |  |
|----------|------|------|--|
| L        | 400  | 520  |  |
| Μ        | 520  | 680  |  |
| N        | 680  | 880  |  |
| Р        | 880  | 1150 |  |
| ٥        | 1150 | 1500 |  |
|          |      |      |  |

Tolerance for each bin limit is  $\pm 15\%$ .

#### Note:

1. Bin categories are established for classification of products. Products may not be available in all bin categories.
