

Features

- Low-voltage operation $V_{DD} = 3.3V$
- 1:8 fanout
- Operation to 350 MHz
- Single input configurable for LVDS, LVPECL, or LVTTTL
- 8 pair of LVPECL outputs
- Drives a 50 ohm load
- Low input capacitance
- Low output skew
- Low propagation delay ($t_{pd} = 4$ ns, typical)
- Commercial and Industrial temperature ranges
- 38-Pin TSSOP Package

Description

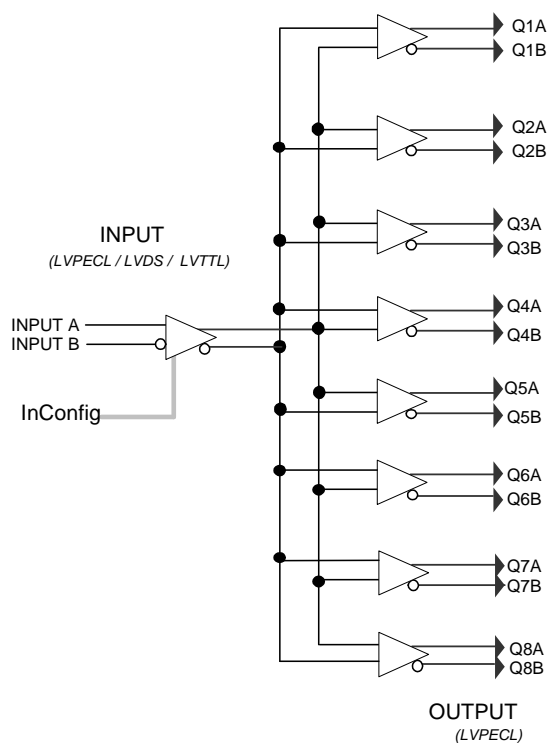

The Cypress CY2DP818 fanout buffer features a single LVDS or a single ended LVTTTL compatible input and eight LVPECL output pairs.

Designed for data-communications clock management applications, the large fanout from a single input reduces loading on the input clock.

The CY2DP818 is ideal for both level translations from single ended to LVPECL and/or for the distribution of LVPECL based clock signals.

The Cypress CY2DP818 has configurable input functions. The input is user configurable via the InConfig pin for single ended or differential input.

Note

- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Notes

3. All input pulses are supplied by a frequency generator with the following characteristics: t_R and $t_F \leq 1$ ns; pulse rate = 50 Mpps; pulse width = 10 ± 0.2 ns.
4. $R_L = 50 \text{ ohm} \pm 1\%$; $Z_{line} = 50 \text{ ohm}$ 6".
5. CL includes instrumentation and fixture capacitance within 6 mm of the UT.
6. TPA and B are used for prop delay and Rise/Fall measurements. TPC is used for VOC measurements only and is otherwise connected to $V_{DD} - 2V$.
