

General Description

The Cypress S70GL02GP 2 Gbit Mirrorbit Flash device is fabricated on 90-nm process technology. This device offers a fast page access time of 25 ns with a corresponding random access time of 110 ns. It features a Write Buffer that allows a maximum of 32 words/64 bytes to be programmed in one operation, resulting in faster effective programming time than standard single byte/word programming algorithms. This makes the device an ideal product for today's embedded applications that require higher density, better performance and lower power consumption.

This document contains information for the S70GL02GP device, which is a dual die stack of two S29GL01GP die. For detailed specifications, refer to the discrete die datasheet provided in [Table 1](#).
