## General Description

This datasheet contains information on the S72XS-R Multi-Chip Product (MCP) stacked products. Refer to the S29VS256R, S29VS128R, S29XS256R, S29XS128R datasheet (002-00833) for full electrical specifications of the Flash memory component.

The S72XS series is a product line of stacked products (MCPs), and consists of:

- S29XS family Address-High, Address-Low, Data Multiplexed Flash memory die
- DDR DRAM

Table 1 and Table 2 lists the products covered in this datasheet.

### Notes

1. Amax indicates highest address bit for memory component: Amax = A12 for 256 Mb DDR DRAM.
2. For Flash, A15 - A0 is tied to DQ15 - DQ0.

Symbol	Description	Flash	RAM
ADQ15 – ADQ0	Flash multiplexed Address and Data	X	–
F-CE#	Flash Chip-enable input	X	–
F-OE#	Flash Output Enable input. Asynchronous relative to CLK for Burst mode.	X	–

F-VCCQ	Flash Input/Output Buffer power supply	X	–
VSS	Ground	X	X
F-RDY	Flash ready output. Indicates the status of the Burst read. $V_{OL}$ = Data invalid, $V_{OH}$ = Data valid.	X	–
F-CLK	Flash Clock. The first rising edge of CLK in conjunction with AVD# low latches the address input and activates burst mode operation. After the initial word is output, subsequent rising edges of CLK increment the internal address counter. CLK should remain low during asynchronous access.	X	–
F-AVD#	Flash Address Valid input. Indicates to device that the valid address is present on the address inputs. $V_{IL}$ = For asynchronous mode, indicates valid address; for burst mode, causes starting address to be latched on rising edge of CLK. $V_{IH}$ = Device ignores address inputs.	X	–
F-RST#	Flash hardware reset input. $V_{IL}$ = device resets and returns to reading array data.	X	–
F-VPP	Flash accelerated input. At $V_{HH}$ , accelerates programming; automatically places device in unlock bypass mode. At $V_{IL}$ , disables all program and erase functions. Should be at $V_{IH}$ for all other conditions.	X	–
D-Amax – D-A0	DRAM Address input	–	X
D-DQ15 – D-DQ0	DRAM Data input/output	–	X
D-CLK	DRAM System Clock	–	X
D-CE#	DRAM Chip Select	–	X
D-CKE	DRAM Clock Enable	–	X
D-BA1 – BA0	DRAM Bank Select	–	X
D-RAS#	DRAM Row Address Strobe	–	X
D-CAS#	DRAM Column Address Strobe	–	X
D-UDQM – D-LDQM	DRAM Data Input Mask	–	X
D-WE#	DRAM Write Enable input	–	X
D-VCCQ	DRAM Input/Output Buffer power supply	–	X
D-VCC	DRAM device power supply	–	X
D-UDQS	DRAM Upper Data Strobe, output with read data and input with write data	–	X
D-LDQS	DRAM Lower Data Strobe, output with read data and input with write data	–	X
D-CLK#	DDR Clock for negative edge of CLK	–	X
RFU	Reserved for Future Use. No device internal signal is currently connected to the package connector but there is potential future use for the connector for a signal. It is recommended to not use RFU connectors for PCB routing channels so that the PCB may take advantage of future enhanced features in compatible footprint devices.	–	–
NC	Not Connected. No device internal signal is connected to the package connector nor is there any future plan to use the connector for a signal. The connection may safely be used for routing space for a signal on a Printed Circuit Board (PCB).	–	–
DNU	Do Not Use. A device internal signal may be connected to the package connector. The connection may be used by Cypress for test or other purposes and is not intended for connection to any host system signal. Any DNU signal related function will be inactive when the signal is at $V_{IL}$ . The signal has an internal pull-down resistor and may be left unconnected in the host system or may be tied to $V_{SS}$ . Do not use these connections for PCB signal routing channels. Do not connect any host system signal to these connections.	–	–
