# DA14581 Development Kit - Basic

This Basic development kit gives you all flexibility to develop with confidence. All of the DA14581's I/Os are available and mapped on to expansion connectors. A debugger is provided on the PCB which in combination with SmartSnippets™, Dialog's complete software environment, enables you to program and test your A4WP or HCI application.

Content:

- Board
- Battery
- USB cable
- Quick starting guide
