

DA14583 Development Kit - Pro

The DA14583 development kit Pro is ideal for software developers who want total control over their software development and want to keep an eye on the power consumption of their application. The Pro kit consists of a starter kit and a daughterboard kit. The starter kit contains the DA14580 motherboard that can be combined the DA14583 QFN40 daughterboard and gives you access to all of the package's GPIOs. The kit's on-board SEGGER chip gives you complete debugging capability while dedicated on-board circuitry allows you, in combination with our complete software environment SmartSnippets™, to profile and fine tune the power consumption of your application to get the most out of the DA14583's advantages.
