## **COILTRONICS**®

## **High Frequency, High Current Power Inductors MPA7030 Series**

### Description

- · Halogen free
- 165°C maximum total temperature operation
- 7.6x7.0x3.0mm maximum surface mount package
- · Magnetically shielded
- Rugged construction
- · Handles high transient inrush current spikes
- Inductance Range from 1.5µH to 8.2µH
- Current range from 3.5 to 17.5 Amps
- RoHS compliant

## **Applications**

- · Automotive electronics (under the hood, interior/exterior)
- Voltage Regulator Module (VRM)
- · Multi-phase regulators
- · Point-of-load modules
- Desktop and server VRMs and EVRDs
- · Base station equipment
- Notebook regulators
- POL Converters
- Battery power systems
- Data networking and storage
- Graphics cards
- LCD Displays, LED drivers

## **Environmental Data**

- Storage temperature range: -55°C to +165°C
- Operating temperature range: -55°C to +165°C (ambient + self-temperature rise)
- Solder reflow temperature: J-STD-020D compliant
- Complies with AEC-Q200 standard

#### Packaging

• Supplied in tape and reel packaging, 1500 parts per 13" reel

1. Open Circuit Inductance (OCL) Test Parameters: 100kHz, 0.25Vrms, 0.0Adc

2. Irms1: DC current for an approximate temperature rise of 40°C without core loss at 85°C ambient temperature. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 165°C under worst case operating conditions verified in the end application.

3. Irms2: DC current rating for for 125°C ambient temperature operation. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 165°C under worst case operating conditions verified in the end application.

- 4. Isat: Peak current for approximately 20% rolloff at +25°C (8R2 = 30%)
- 5. K-Factor: Used to determine  $B_{D-D}$  for core loss (see graph).  $B_{D-D} = K * L * \Delta I. B_{D-D}$ : (Gauss), K: (K-Factor from table), L: (Inductance in μH), ΔI (Peak-to-peak ripple current in amps)

6. Part Number Definition: MPA7030-xxx-R - MPA7030 = Product code and size

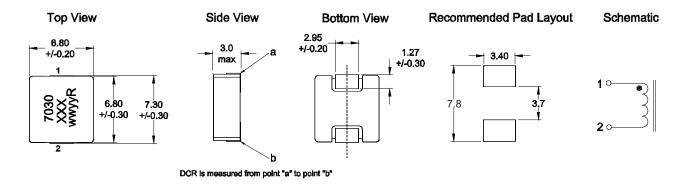

- xxx= Inductance value in µH, R = decimal point. If no "R" is present, then third digit equals the number of zeros.

- "-R" suffix = RoHS compliant

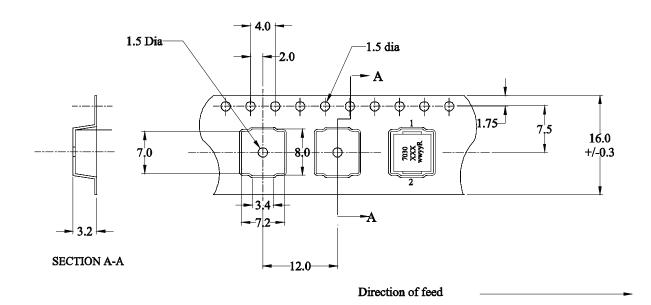

**Dimensions - mm** 

Part Marking: 7030= Size Code, XXX= Inductance value in uH, R=Decimal Point, If no R is present 3rd digit equals number of zeros, wwyy= Date Code, R= Revision Level Tolerance are +/- 0.3 mm unless otherwise specified Soldering surfaces to be coplanar within 0.10 mm

Soluening surfaces to be copianal within 0. To him

## Packaging Information - mm

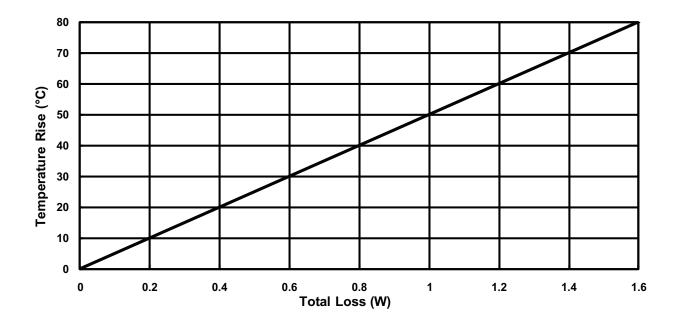

Supplied in tape and reel packaging, 1500 parts per 13" diameter reel.
