

**Product division: NTC**

**Product type: S234/xxx/M**

**Product name: Inrush Current Limiter**

**Ordering code: B57234S0xxxM000**

Data sheet

## **APPLICATION :**

NTC-thermistor for inrush current limiting in peripheral communication equipment, e.g. in switch-mode power supplies

## **FEATURES :**

- Black coated thermistor disk
- Coating material is flame retardant (UL 94 V-0 approved)
- Kinked leads of tinned copper wire
- Lead spacing 7.5 mm
- Manufacturer's logo, NTC and resistance value stamped in white
- High stability of electrical characteristic
- Terminals solderable in accordance with IEC 60068-2-20, test ta, method 1
- ICL support to fulfill the requirements according EN 61000 of power circuits
- Usable in series connections up to 265 V<sub>rms</sub>
- UL approval (E 69802)
- The component is compliant with ROHS (DIRECTIVE 2002/95/EC OF THE EUROPEAN PARLIAMENT AND THE COUNCIL of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment
- Also available on tape

### Maximum continuous current $I_{\max}$ :

The  $I_{\max}$  denotes the maximum permissible continuous current (dc or rms values for sine-shaped ac) in the temperature range 0 to 65°C.

### Maximum current derating ( $I / I_{\max}$ ) :

$$\text{Percent of } I_{\max} = 100 \left[ 1 - \frac{T_A - 65^\circ \text{C}}{T_{\max} - 65^\circ \text{C}} \right]$$

$T_A$  = ambient temperature ( $T_A > 65^\circ \text{C}$ )  
 $T_{\max} = 170^\circ \text{C}$

Fig. 1. - Maximum current derating ( $I / I_{\max}$ )

### Maximum switchable capacity ( $C_T$ ) :

The maximum switchable capacity ( $C_T$ ) is the maximum capacity which may be discharged across the thermistor. See Fig.2 Maximum switchable capacity measuring circuit.

### Dependence of NTC resistance on current :

The resistance effective in the usual current range can be approximated with the fit parameter **k** and **n**.

$$R_{\text{NTC}} = k \cdot I^n \quad 0.3 \cdot I_{\max} < I \leq I_{\max}$$

$R_{\text{NTC}}$  Resistance value to be determined at current  $I$  [ $\Omega$ ]

$k, n$  Fit parameter, see table with ordering codes

$I$  Current flowing through the NTC (insert numerical value in A)

The calculated values only serve as an estimate for operation in still air at an ambient temperature of 25°C.

### MARKING :

- EPCOS – logo
- resistance value
- NTC
- Date code with 4 digits (year and week of production): 0540 (example for week 40 in year 2005)

Resistance - Temperature Curve

## ROBUSTNESS OF TERMINATIONS :

The leads meet the requirements of IEC 60068-2-21.

Test	Test conditions	Remarks
Tensile strength	Test Ua1: Fasten body with a force applied to each lead 10 [N] for 10 [s]	No visible damage
Bending strength	Test Ub: Fasten body with two 90°-bends in opposite direction at a force of 10 [N]	No visible damage (Peel off of coating along the lead accepted)

## RELIABILITY REQUIREMENTS :

Test	Standard	Test conditions	$\Delta R_{25}/R_{25}$ (typical)	Remarks
Storage in dry heat	IEC 60068-2-2	Storage at upper category temperature T: 170°C t: 1 000 h	< 10 %	No visible damage
Storage in damp heat, steady state	IEC 60068-2-3	Temperature of air: 40°C Relative humidity of air: 93 % Duration: 21 days	< 5 %	No visible damage
Rapid change of temperature	IEC 60068-2-14	Lower test temperature: -55°C (time: 15 min) Upper test temperature: 170°C (time: 15 min) Time to change from lower to upper temperature : < 30 sec Number of cycles: 10	< 10 %	No visible damage
Endurance (storage at max. current)		$I = I_{\max}$ t = 1000 h T = 25°C	< 10 %	No visible damage
Electrical cycling test	*	$I = I_{\max}$ load on: 1 min load off: 6 min Number of cycles: 1000	< 10 %	No visible damage
Maximum switchable capacity test	**	Capacity = $C_T$ Number of cycles: 1000	< 5 %	No visible damage

## Soldering of Components

Process	Conditions	Remarks
Soldering	<b>Dip soldering</b> : 260°C max, 4 sec max, 6mm min from thermistor body <b>Iron soldering</b> : 360°C max, 2 sec max, 6 mm min from thermistor body	Low resistance drift

### \* Electrical cycling Test

Each cycle has to start with parts cooled down to room temperature. It has to cover the portion of the R/T curve between room temperature and the resistance of the components as stabilized at the maximum continuous current  $I_{max}$  (that is the minimum operating resistance). One cycle lasts 7 minutes.

### \*\* Maximum switchable capacity test

The capacitor ( $C_T$ ) is discharged across a series fixed resistor and the thermistor, shown in Figure 2. The charge voltage is chosen so that the voltage applied to the thermistor at the beginning of discharge is 170/345 [V], corresponding to  $(110/230V + \Delta V) \times 1.41$ .

The capacitor is discharged across a series fixed resistor and the thermistor 1 000 times at ambient temperature of between 15°C and 35°C. Each cycle has to start with thermistors cooled down to ambient temperature.

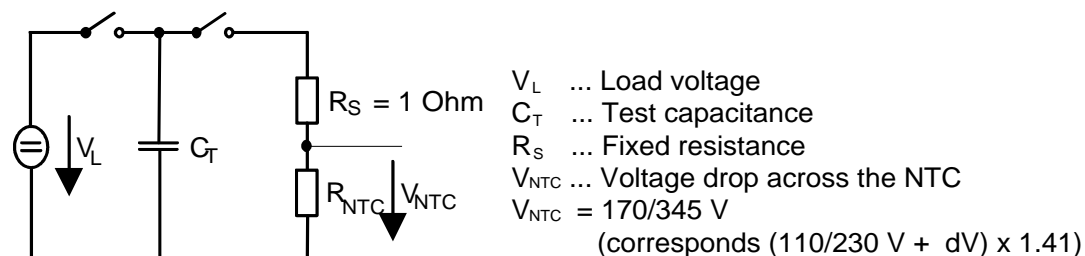

Fig. 2. - Maximum switchable capacity measuring circuit

## TAPING AND PACKING :

### Packing codes :

The last two digits of the complete ordering code state the packing mode :

Packing		Code	Number of Pieces
Bulk packing	Bulk	00	500
Reel packing	Tape	51	1000
AMMO packing	Tape	54	750

ISSUE DATE	11.05.05	ISSUE	b	PUBLISHER	KB S PE	PAGE	15/19
------------	----------	-------	---	-----------	---------	------	-------

Product division: NTC

Product type: S234/xxx/M

Product name: Inrush Current Limiter

Ordering code: B57234S0xxxM000

## Data sheet

Example : B57234S0100M000 untaped  
B57234S0100M051 taped reel packing

Table 1: Package dimensions and weights of unit packages

Packing	Pcs / unit	Approx. Weight (g)	Dimensions (mm)
Bulk	500	1100	x=65, y=230, z=125
Ammo	750	2100	x=56, y=355, z=355
Reel	1000	2500	d=500, f=23±1, n=approx. 59, w=72 max

Dimensions x, y, z acc. to fig. 1

Dimensions d, f, n, w acc. to fig. 2

### Label

The shown label is an example for bulk packing. Type code and ordering code do not refer to the actual type.

### Internal Construction

The above picture shows the internal construction of EPCOS ICL's.

Note: Coating may have cracks or chips due to acting mechanical force on the wire, but this does not affect the performance of the component
