Finisar's Laserwire™ active cables provide the lowest-cost serial data link solution for up to 10 Gb/s, while providing a very lightweight, low-EMI and low-power alternative to comparable short reach solutions. Laserwire™ operates independently of protocol and can thus be used in a wide range of applications. Laserwire™ plugs into the Laserwire™ Jack (P/N FCBJ110LE1), a small-footprint host-board connector. In addition, connection to SFP+, QSFP or XFP ports is possible using Laserwire™ SFP+, QSFP or XFP adapters (P/N FTLX0071D4BNL, FTLX00Q1D4BNL or FTLX0011D4BNL, respectively). Laserwire™ utilizes a limiting receiver, avoiding the challenges of a linear receiver interface.

## IX. LED Operation

**Figure 6. Laserwire LED operation.**

The optical Laserwire LEDs are a physical layer indicator and do not indicate actual traffic flow. A green light on both ends signifies that light, not traffic, is being transmitted by the laser in the opposite end. A red light indicates that the laser in the opposite end is not functioning either because it is not inserted and/or not powered. No LED operation signifies that the lasers in both ends are not transmitting light because both ends are either not inserted and/or not powered.
