## Notes:

- 1. Operating power is set by the peak operating current  $I_{PEAK}=I_{BIAS}+I_{MODULATION}$ .
- 2. Operation at temperatures outside the specified range may result in the threshold current exceeding the maximums defined in the electro-optical characteristics table.
- 3. Slope efficiency is defined as  $\Delta Po/\Delta IF$  at a total power output of 1.3 mW.
- 4. Rise and fall times are sensitive to drive electronics, 200ps rise and fall times are achievable with Honeywell VCSELs.
- 5. Beam divergence is defined as the total included angle between the  $1/e^2$  intensity points.
