1 GENERAL DESCRIPTION

The Inventek ISM4390-L57 is an embedded (eS-WiFi™) 2.4 GHz wireless Internet Connectivity device. The Wi-Fi module hardware consists of an ARM Cortex™ M3 MCU host processor, and Broadcom Wi-Fi device. The module provides a UART interface enabling connection to an embedded design. The Wi-Fi module requires no operating system and has a completely integrated TCP/IP Stack that only requires AT commands to establish connectivity for your wireless product, minimizing development time, testing routines and certification. The low cost, small foot print (10.5 mm x 10.5 mm) and ease of design-in make it ideal for a range of embedded applications. The module hardware can be used with Inventek's AT Command set or with Broadcom's WICED™ SDK.

11 PRODUCT COMPLIANCE CONSIDERATIONS

RoHS: Restriction of Hazardous Substances (RoHS) directive has come into force since 1st July 2006 all electronic products sold in the EU must be free of hazardous materials, such as lead. Inventek is fully committed to being one of the first to introduce lead-free products while maintaining backwards compatibility and focusing on a continuously high level of product and manufacturing quality.

EMI/EMC: The Inventek module design embeds EMI/EMC suppression features and accommodations to allow for higher operational reliability in noisier (RF) environments and easier integration compliance in host (OEM) applications.
