# Pre-paid SIM card

Enabling your M2M device on a cellular network doesn't have to be complicated. These cards are hardware independent and will work with any device which support the T-Mobile Network 2G GSM or 3G AWS bands 1700/2100MHz. Supporting data-only, these SIM cards provide a simple solution for enabling your device on the network in a range of data and monthly options to suit your requirements.

Jazz Wireless pre-paid options allow you the freedom to monitor data usage without a contract and give the flexibility to add data or time to the service as needed.

Select
- SIMs available in a range of Data size and time based
- Select level of Data that works for you!

- Streaming of data in irregular intervals, event driven

Applications

✦ Collecting data remotely

✦ Monitoring, Surveillance

✦ Maintenance – proactive, CR

✦ Service Calls

✦ Utility Metering

✦ Asset Management

✦ Rental Equipment – usage model

✦ NEW PRODUCT DEVELOPMENT

M2M

With the ability to communicate anything from anywhere there are varying data demands put on your device. For device usage with triggered events, or sending monitored data, you should have the flexibility to have a data plan that meets your needs and have the ability to review data usage in real time. Review the chart to the left for example data usage by particular applications. If you need more data you can quickly upgrade to the amount you need, with the ability to monitor you won't need to estimate your data requirements, just use it and review what's being used!

Pre-paid SIM Selection

Part Number	Jazz Wireless Part Number	Data Allotment	Time base
