III. Reliability Tests

Note: After any of the following tests performed, the sensitivity of the microphone unit shall not deviate more than ±3dB from its initial value. The microphone shall maintain its initial operation and appearance. Measurements for tests with thermal requirements are to be done after 2hrs of condistioning at 20°C.

| Vibration Test | The microphone to have no interferance in operation after vibrations, 10Hz to 55Hz for 1 minute full amplitude 1.52mm, for 2 hours at three axises. | | |
|------------------------|--|--|--|
| Drop Test | The microphone unit must operate when dropped three times once on each axis from a height of 1m onto a metal plate. | | |
| Temperature Test | High The microphone unit must operate within its sensitivity specifications after subjected to the following conditions: +85°C for 200 hrs, and exposed to room temperature for 2 hrs. | | |
| | Low The microphone unit must operate within its sensitivity specifications after subjected to the following conditions: -40°C for 200 hrs, and exposed to room temperature for 2 hrs. | | |
| Humidity Test | +60°C at 95%RH for 200 hrs | | |
| Temperature Cycle Test | After exposure at -40°C for 45 minutes, at +85°C for 45 minutes, 27 cycles. (The measurements to be done after 2hrs of conditioning at +20°C.)transition time: 15 min. | | |
