Product Specification: SP0103 Series with Integrated Amplifier

This document applies the following SiSonic Model Numbers:

SP0103NC3-2 SP0103NC3-3

SiSonic microphone with integrated amplifier offers designers numerous features: up to 20dB gain, surface-mountable, compatible with standard solder reflow, pick-and-place with standard high speed automated equipment, low output impedance, and excellent environmental characteristics. External amplifiers amplify both signal and external noise induced in the circuit, compared to SiSonic SP0103 that amplifies the signal prior to external noise.

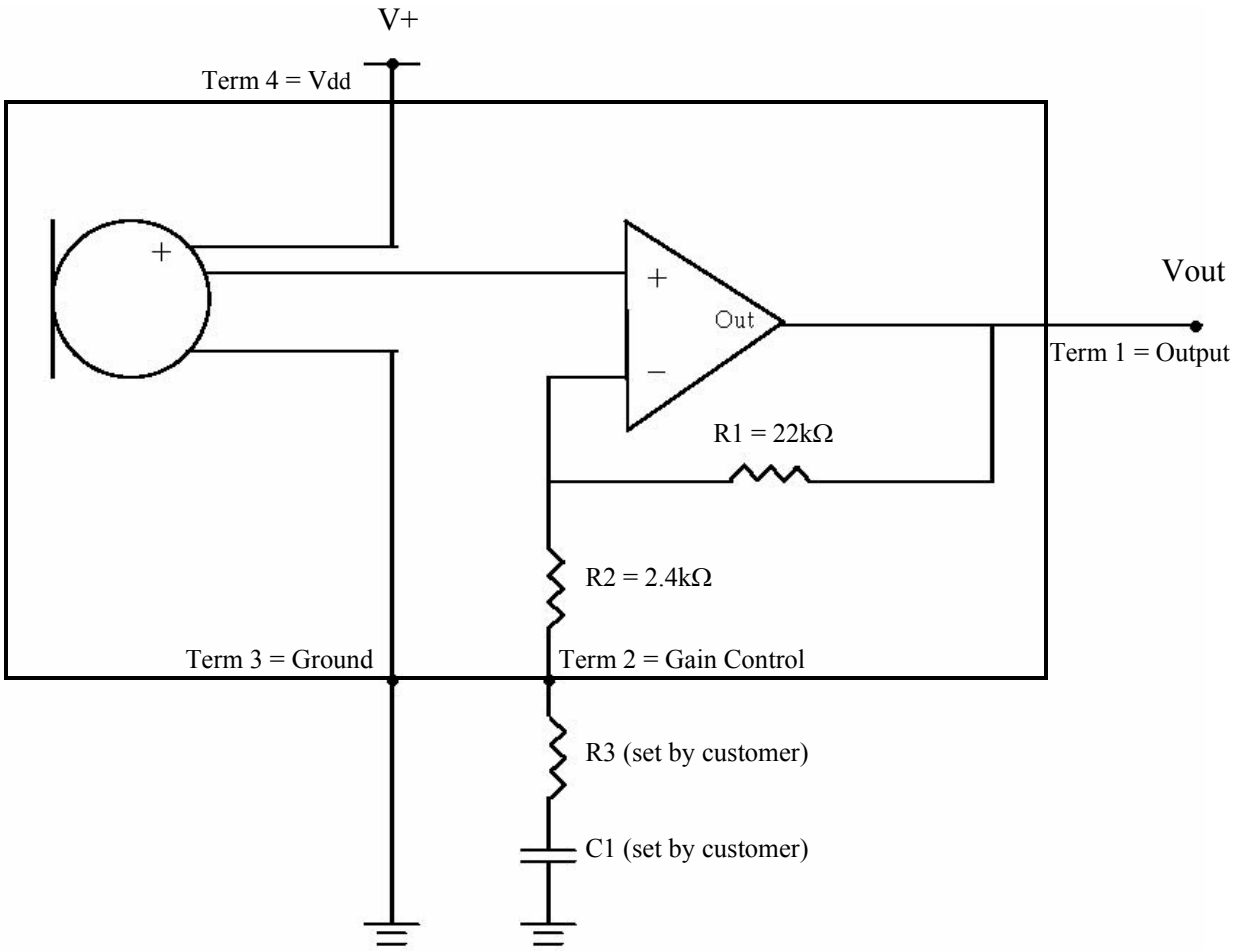
Recommended Interface Circuit for SP0103N Integrated Amplifier



Desired Gain	**Pin 2 Termination Method**
Unity Gain (0dB)	Tie Terminal 2 directly to Output (Terminal 1).
20dB Gain	Tie Terminal 2 through C1 (0.47uF) to Ground.
Adjustable Gain	Add R3 and C1. Use formulas provided to calculate settings, or contact Knowles for support.

Setting Gain Formulas:
Gain of non-inverting Op-Amp is determined as:
➡ G=1+ {R1 / (R2 + R3)} Gain(dB) = 20 * log(G)
High-pass-filter Corner Frequency:
➡ C.F. = 1 / {2*pi*(R2 + R3) * C1}
