Description

The MAGX-000035-01000X is a gold-metalized unmatched Gallium Nitride (GaN) on Silicon Carbide RF power transistor suitable for a variety of RF power amplifier applications. Using state of the art wafer fabrication processes, these high performance transistors provide high gain, efficiency, bandwidth, and ruggedness over multiple octave bandwidths for today's demanding application needs.

The MAGX-000035-01000X is constructed with either a flanged or flangeless ceramic package which provides excellent thermal performance. High breakdown voltages allow for reliable and stable operation in extreme mismatched load conditions compared with older semiconductor technologies.

1. Exceeding any one or combination of these limits may cause permanent damage to this device
2. Junction temperature directly affects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.
3. For saturated performance it is recommended that the sum of ($3 \cdot V_{DD} + \text{abs}(V_{GG})$) < 175 V.

CORRECT DEVICE SEQUENCING

TURNING THE DEVICE ON

1. Set V_{GS} to the pinch-off (V_P), typically -5 V.
2. Turn on V_{DS} to nominal voltage (50 V).
3. Increase V_{GS} until the I_{DS} current is reached.
4. Apply RF power to desired level.

TURNING THE DEVICE OFF

1. Turn the RF power off.
2. Decrease V_{GS} down to V_P .
3. Decrease V_{DS} down to 0 V.
4. Turn off V_{GS} .
