## Features

- High Performance, Low Power AVR ${ }^{\circledR}$ 8-Bit Microcontroller
- Advanced RISC Architecture
- 130 Powerful Instructions - Most Single Clock Cycle Execution
- $32 \times 8$ General Purpose Working Registers
- Fully Static Operation
- Up to 16 MIPS Throughput at 16 MHz
- On-Chip 2-cycle Multiplier
- Non-volatile Program and Data Memories
- 16K bytes of In-System Self-Programmable Flash

Endurance: 10,000 Write/Erase Cycles

- Optional Boot Code Section with Independent Lock Bits

In-System Programming by On-chip Boot Program
True Read-While-Write Operation

- 512 bytes EEPROM

Endurance: 100,000 Write/Erase Cycles

- 1K byte Internal SRAM
- Programming Lock for Software Security
- JTAG (IEEE std. 1149.1 compliant) Interface
- Boundary-scan Capabilities According to the JTAG Standard
- Extensive On-chip Debug Support
- Programming of Flash, EEPROM, Fuses, and Lock Bits through the JTAG Interface
- Peripheral Features
- $4 \times 25$ Segment LCD Driver
- Two 8-bit Timer/Counters with Separate Prescaler and Compare Mode
- One 16-bit Timer/Counter with Separate Prescaler, Compare Mode, and Capture Mode
- Real Time Counter with Separate Oscillator
- Four PWM Channels
- 8-channel, 10-bit ADC
- Programmable Serial USART
- Master/Slave SPI Serial Interface
- Universal Serial Interface with Start Condition Detector
- Programmable Watchdog Timer with Separate On-chip Oscillator
- On-chip Analog Comparator
- Interrupt and Wake-up on Pin Change
- Special Microcontroller Features
- Power-on Reset and Programmable Brown-out Detection
- Internal Calibrated Oscillator
- External and Internal Interrupt Sources
- Five Sleep Modes: Idle, ADC Noise Reduction, Power-save, Power-down, and Standby
- I/O and Packages
- 53 Programmable I/O Lines
- 64-lead TQFP and 64-pad MLF
- Speed Grade:
- ATmega169V: 0-4 MHz @ 1.8-5.5V, 0-8 MHz @ 2.7-5.5V
- ATmega169: 0-8 MHz @ 2.7-5.5V, 0-16 MHz @ 4.5-5.5V
- Temperature range:
- $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ Industrial
- Ultra-Low Power Consumption
- Active Mode:
$1 \mathrm{MHz}, 1.8 \mathrm{~V}: 350 \mu \mathrm{~A}$
$32 \mathrm{kHz}, 1.8 \mathrm{~V}: 20 \mu \mathrm{~A}$ (including Oscillator)
$32 \mathrm{kHz}, 1.8 \mathrm{~V}: 40 \mu \mathrm{~A}$ (including Oscillator and LCD)
- Power-down Mode:
$0.1 \mu \mathrm{~A}$ at 1.8 V

Note: This is a summary document. A complete document is available on our Web site at www.atmel.com.

## Pin Configurations

## Disclaimer

Figure 1. Pinout ATmega169

Note: The large center pad underneath the MLF packages is made of metal and internally connected to GND. It should be soldered or glued to the board to ensure good mechanical stability. If the center pad is left unconnected, the package might loosen from the board.

Typical values contained in this datasheet are based on simulations and characterization of other AVR microcontrollers manufactured on the same process technology. Min and Max values will be available after the device is characterized.

## Overview

The ATmega169 is a low-power CMOS 8-bit microcontroller based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATmega169 achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

## Block Diagram

Figure 2. Block Diagram

The AVR core combines a rich instruction set with 32 general purpose working registers. All the 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The ATmega169 provides the following features: 16K bytes of In-System Programmable Flash with Read-While-Write capabilities, 512 bytes EEPROM, 1K byte SRAM, 53 general purpose I/O lines, 32 general purpose working registers, a JTAG interface for Boundary-scan, On-chip Debugging support and programming, a complete On-chip LCD controller with internal step-up voltage, three flexible Timer/Counters with compare modes, internal and external interrupts, a serial programmable USART, Universal Serial Interface with Start Condition Detector, an 8-channel, 10-bit ADC, a programmable Watchdog Timer with internal Oscillator, an SPI serial port, and five software selectable power saving modes. The Idle mode stops the CPU while allowing the SRAM, Timer/Counters, SPI port, and interrupt system to continue functioning. The Powerdown mode saves the register contents but freezes the Oscillator, disabling all other chip functions until the next interrupt or hardware reset. In Power-save mode, the asynchronous timer and the LCD controller continues to run, allowing the user to maintain a timer base and operate the LCD display while the rest of the device is sleeping. The ADC Noise Reduction mode stops the CPU and all I/O modules except asynchronous timer, LCD controller and ADC, to minimize switching noise during ADC conversions. In Standby mode, the crystal/resonator Oscillator is running while the rest of the device is sleeping. This allows very fast start-up combined with low-power consumption.
The device is manufactured using Atmel's high density non-volatile memory technology. The On-chip ISP Flash allows the program memory to be reprogrammed In-System through an SPI serial interface, by a conventional non-volatile memory programmer, or by an On-chip Boot program running on the AVR core. The Boot program can use any interface to download the application program in the Application Flash memory. Software in the Boot Flash section will continue to run while the Application Flash section is updated, providing true Read-While-Write operation. By combining an 8-bit RISC CPU with In-System Self-Programmable Flash on a monolithic chip, the Atmel ATmega169 is a powerful microcontroller that provides a highly flexible and cost effective solution to many embedded control applications.
The ATmega169 AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators, In-Circuit Emulators, and Evaluation kits.

## Pin Descriptions

## VCC

## GND

Port A (PA7..PA0)

Port B (PB7..PB0)

## Port C (PC7..PC0)

## Port D (PD7..PD0)

## Port F (PF7..PF0)

Ground.
Port A is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port A output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port A pins that are externally pulled low will source current if the pull-up resistors are activated. The Port A pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port A also serves the functions of various special features of the ATmega169 as listed on page 60.

Port B is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port B has better driving capabilities than the other ports.
Port B also serves the functions of various special features of the ATmega169 as listed on page 61.

Port C is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port C output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port C pins that are externally pulled low will source current if the pull-up resistors are activated. The Port C pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port C also serves the functions of special features of the ATmega169 as listed on page 64.

Port D is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port D output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port D pins that are externally pulled low will source current if the pull-up resistors are activated. The Port D pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port D also serves the functions of various special features of the ATmega169 as listed on page 66.

Port E is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port E output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port E pins that are externally pulled low will source current if the pull-up resistors are activated. The Port E pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port E also serves the functions of various special features of the ATmega169 as listed on page 68.

Port $F$ serves as the analog inputs to the $A / D$ Converter.
Port F also serves as an 8-bit bi-directional I/O port, if the A/D Converter is not used. Port pins can provide internal pull-up resistors (selected for each bit). The Port F output
buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port F pins that are externally pulled low will source current if the pull-up resistors are activated. The Port F pins are tri-stated when a reset condition becomes active, even if the clock is not running. If the JTAG interface is enabled, the pull-up resistors on pins PF7(TDI), PF5(TMS), and PF4(TCK) will be activated even if a reset occurs.

Port F also serves the functions of the JTAG interface.

Port G is a 5-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port G output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port G pins that are externally pulled low will source current if the pull-up resistors are activated. The Port G pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port G also serves the functions of various special features of the ATmega169 as listed on page 68.

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running. The minimum pulse length is given in Table 16 on page 38. Shorter pulses are not guaranteed to generate a reset.

Input to the inverting Oscillator amplifier and input to the internal clock operating circuit.
XTAL2
Output from the inverting Oscillator amplifier.
AVCC is the supply voltage pin for Port $F$ and the A/D Converter. It should be externally connected to $\mathrm{V}_{\mathrm{CC}}$, even if the ADC is not used. If the ADC is used, it should be connected to $\mathrm{V}_{\mathrm{CC}}$ through a low-pass filter.

This is the analog reference pin for the A/D Converter.
An external capacitor (typical $>470 \mathrm{nF}$ ) must be connected to the LCDCAP pin as shown in Figure 97. This capacitor acts as a reservoir for LCD power ( $\mathrm{V}_{\mathrm{LCD}}$ ). A large capacitance reduces ripple on $\mathrm{V}_{\text {LCD }}$ but increases the time until VLCD reaches its target value.

Note: 1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
2. I/O Registers within the address range $0 \times 00-0 \times 1 \mathrm{~F}$ are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
3. Some of the Status Flags are cleared by writing a logical one to them. Note that, unlike most other AVRs, the CBI and SBI instructions will only operate on the specified bit, and can therefore be used on registers containing such Status Flags. The CBI and SBI instructions work with registers $0 \times 00$ to $0 \times 1 \mathrm{~F}$ only.
4. When using the I/O specific commands IN and OUT, the I/O addresses 0x00-0x3F must be used. When addressing I/O Registers as data space using LD and ST instructions, 0x20 must be added to these addresses. The ATmega169 is a complex microcontroller with more peripheral units than can be supported within the 64 location reserved in Opcode for the IN and OUT instructions. For the Extended I/O space from 0x60-0xFF in SRAM, only the ST/STS/STD and LD/LDS/LDD instructions can be used.

## Instruction Set Summary

| Mnemonics | Operands | Description | Operation | Flags | \#Clocks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ARITHMETIC AND LOGIC INSTRUCTIONS |  |  |  |  |  |
| ADD | Rd, Rr | Add two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}+\mathrm{Rr}$ | Z,C,N,V,H | 1 |
| ADC | Rd, Rr | Add with Carry two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}+\mathrm{Rr}+\mathrm{C}$ | Z,C,N, V, H | 1 |
| ADIW | Rdi, K | Add Immediate to Word | Rdh:Rdl $\leftarrow$ Rdh:Rdl + K | Z,C,N,V,S | 2 |
| SUB | Rd, Rr | Subtract two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}-\mathrm{Rr}$ | Z,C,N,V,H | 1 |
| SUBI | Rd, K | Subtract Constant from Register | $\mathrm{Rd} \leftarrow \mathrm{Rd}-\mathrm{K}$ | Z,C,N,V,H | 1 |
| SBC | Rd, Rr | Subtract with Carry two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}-\mathrm{Rr}-\mathrm{C}$ | Z,C,N,V,H | 1 |
| SBCI | Rd, K | Subtract with Carry Constant from Reg. | $\mathrm{Rd} \leftarrow \mathrm{Rd}-\mathrm{K}-\mathrm{C}$ | Z,C,N,V,H | 1 |
| SBIW | Rdi, K | Subtract Immediate from Word | Rdh:Rdl $\leftarrow$ Rdh:Rdl - K | Z,C,N,V,S | 2 |
| AND | Rd, Rr | Logical AND Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd} \bullet \mathrm{Rr}$ | Z,N,V | 1 |
| ANDI | Rd, K | Logical AND Register and Constant | $\mathrm{Rd} \leftarrow \mathrm{Rd} \bullet \mathrm{K}$ | Z,N,V | 1 |
| OR | Rd, Rr | Logical OR Registers | $\mathrm{Rd} \leftarrow \mathrm{Rdv} \mathrm{Rr}$ | Z,N,V | 1 |
| ORI | Rd, K | Logical OR Register and Constant | $\mathrm{Rd} \leftarrow \mathrm{Rd}$ v K | Z,N,V | 1 |
| EOR | Rd, Rr | Exclusive OR Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd} \oplus \mathrm{Rr}$ | Z,N,V | 1 |
| COM | Rd | One's Complement | Rd $\leftarrow 0 \times \mathrm{FFF}-\mathrm{Rd}$ | Z,C,N, V | 1 |
| NEG | Rd | Two's Complement | $\mathrm{Rd} \leftarrow 0 \times 00-\mathrm{Rd}$ | Z,C,N,V,H | 1 |
| SBR | Rd, K | Set Bit(s) in Register | $R d \leftarrow R d v K$ | Z,N,V | 1 |
| CBR | Rd, K | Clear Bit(s) in Register | $\mathrm{Rd} \leftarrow \mathrm{Rd} \bullet(0 x F F-K)$ | Z,N,V | 1 |
| INC | Rd | Increment | $\mathrm{Rd} \leftarrow \mathrm{Rd}+1$ | Z,N,V | 1 |
| DEC | Rd | Decrement | $\mathrm{Rd} \leftarrow \mathrm{Rd}-1$ | Z,N,V | 1 |
| TST | Rd | Test for Zero or Minus | $\mathrm{Rd} \leftarrow \mathrm{Rd} \bullet \mathrm{Rd}$ | Z,N,V | 1 |
| CLR | Rd | Clear Register | $\mathrm{Rd} \leftarrow \mathrm{Rd} \oplus \mathrm{Rd}$ | Z,N,V | 1 |
| SER | Rd | Set Register | $\mathrm{Rd} \leftarrow 0 \mathrm{xFF}$ | None | 1 |
| MUL | Rd, Rr | Multiply Unsigned | $\mathrm{R} 1: \mathrm{R0} 0 \leftarrow \mathrm{Rdx} \times \mathrm{Rr}$ | Z,C | 2 |
| MULS | Rd, Rr | Multiply Signed | $\mathrm{R} 1: \mathrm{R0} 0 \leftarrow \mathrm{Rd} \times \mathrm{Rr}$ | Z,C | 2 |
| MULSU | Rd, Rr | Multiply Signed with Unsigned | $\mathrm{R} 1: \mathrm{R0} 5 \mathrm{Rdx} \times \mathrm{Rr}$ | Z,C | 2 |
| FMUL | Rd, Rr | Fractional Multiply Unsigned | $\mathrm{R1}: \mathrm{R} 0 \leftarrow(\mathrm{Rd} \times \mathrm{Rr}) \ll 1$ | Z,C | 2 |
| FMULS | Rd, Rr | Fractional Multiply Signed | $\mathrm{R} 1: \mathrm{R} 0 \leftarrow(\mathrm{Rd} \times \mathrm{Rr}) \ll 1$ | Z,C | 2 |
| FMULSU | Rd, Rr | Fractional Multiply Signed with Unsigned | $\mathrm{R} 1: \mathrm{R} 0 \leftarrow(\mathrm{Rd} \times \mathrm{Rr}) \ll 1$ | Z,C | 2 |
| BRANCH INSTRUCTIONS |  |  |  |  |  |
| RJMP | k | Relative Jump | $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 2 |
| IJMP |  | Indirect Jump to (Z) | $\mathrm{PC} \leftarrow \mathrm{Z}$ | None | 2 |
| JMP | k | Direct Jump | $\mathrm{PC} \leftarrow \mathrm{k}$ | None | 3 |
| RCALL | k | Relative Subroutine Call | $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 3 |
| ICALL |  | Indirect Call to (Z) | $\mathrm{PC} \leftarrow \mathrm{Z}$ | None | 3 |
| CALL | k | Direct Subroutine Call | $\mathrm{PC} \leftarrow \mathrm{k}$ | None | 4 |
| RET |  | Subroutine Return | $\mathrm{PC} \leftarrow$ STACK | None | 4 |
| RETI |  | Interrupt Return | $\mathrm{PC} \leftarrow$ STACK | 1 | 4 |
| CPSE | Rd, Rr | Compare, Skip if Equal | if ( $\mathrm{Rd}=\mathrm{Rr}$ ) $\mathrm{PC} \leftarrow \mathrm{PC}+2$ or 3 | None | 1/2/3 |
| CP | Rd, Rr | Compare | $\mathrm{Rd}-\mathrm{Rr}$ | Z, N,V,C,H | 1 |
| CPC | Rd, Rr | Compare with Carry | $\mathrm{Rd}-\mathrm{Rr}-\mathrm{C}$ | Z, N,V,C,H | 1 |
| CPI | Rd, K | Compare Register with Immediate | Rd-K | Z, N,V,C,H | 1 |
| SBRC | Rr, b | Skip if Bit in Register Cleared | if $(\operatorname{Rr}(\mathrm{b})=0) \mathrm{PC} \leftarrow \mathrm{PC}+2$ or 3 | None | 1/2/3 |
| SBRS | Rr, b | Skip if Bit in Register is Set | if $(\operatorname{Rr}(\mathrm{b})=1) \mathrm{PC} \leftarrow \mathrm{PC}+2$ or 3 | None | 1/2/3 |
| SBIC | P, b | Skip if Bit in I/O Register Cleared | if $(\mathrm{P}(\mathrm{b})=0) \mathrm{PC} \leftarrow \mathrm{PC}+2$ or 3 | None | 1/2/3 |
| SBIS | P, b | Skip if Bit in I/O Register is Set | if $(P(\mathrm{~b})=1) \mathrm{PC} \leftarrow \mathrm{PC}+2$ or 3 | None | 1/2/3 |
| BRBS | s, k | Branch if Status Flag Set | if (SREG(s) $=1$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRBC | s, k | Branch if Status Flag Cleared | if (SREG(s) $=0$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BREQ | k | Branch if Equal | if $(Z=1)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRNE | k | Branch if Not Equal | if $(Z=0)$ then $P C \leftarrow P C+k+1$ | None | 1/2 |
| BRCS | k | Branch if Carry Set | if ( $\mathrm{C}=1$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRCC | k | Branch if Carry Cleared | if ( $\mathrm{C}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRSH | k | Branch if Same or Higher | if ( $\mathrm{C}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRLO | k | Branch if Lower | if ( $\mathrm{C}=1$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRMI | k | Branch if Minus | if $(\mathrm{N}=1)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRPL | k | Branch if Plus | if $(\mathrm{N}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRGE | k | Branch if Greater or Equal, Signed | if ( $\mathrm{N} \oplus \mathrm{V}=0$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRLT | k | Branch if Less Than Zero, Signed | if $(\mathrm{N} \oplus \mathrm{V}=1)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRHS | k | Branch if Half Carry Flag Set | if ( $\mathrm{H}=1$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRHC | k | Branch if Half Carry Flag Cleared | if $(\mathrm{H}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRTS | k | Branch if T Flag Set | if $(\mathrm{T}=1)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRTC | k | Branch if T Flag Cleared | if ( $\mathrm{T}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRVS | k | Branch if Overflow Flag is Set | if $(\mathrm{V}=1)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRVC | k | Branch if Overflow Flag is Cleared | if $(\mathrm{V}=0)$ then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |

| Mnemonics | Operands | Description | Operation | Flags | \#Clocks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| BRIE | k | Branch if Interrupt Enabled | if ( $\mathrm{I}=1$ ) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BRID | k | Branch if Interrupt Disabled | if (I=0) then $\mathrm{PC} \leftarrow \mathrm{PC}+\mathrm{k}+1$ | None | 1/2 |
| BIT AND BIT-TEST INSTRUCTIONS |  |  |  |  |  |
| SBI | P, b | Set Bit in I/O Register | $\mathrm{l} / \mathrm{O}(\mathrm{P}, \mathrm{b}) \leftarrow 1$ | None | 2 |
| CBI | P, b | Clear Bit in I/O Register | $\mathrm{I} / \mathrm{O}(\mathrm{P}, \mathrm{b}) \leftarrow 0$ | None | 2 |
| LSL | Rd | Logical Shift Left | $\operatorname{Rd}(\mathrm{n}+1) \leftarrow \operatorname{Rd}(\mathrm{n}), \mathrm{Rd}(0) \leftarrow 0$ | Z,C,N, V | 1 |
| LSR | Rd | Logical Shift Right | $\operatorname{Rd}(\mathrm{n}) \leftarrow \operatorname{Rd}(\mathrm{n}+1), \operatorname{Rd}(7) \leftarrow 0$ | Z,C,N, V | 1 |
| ROL | Rd | Rotate Left Through Carry | $\operatorname{Rd}(0) \leftarrow \mathrm{C}, \mathrm{Rd}(\mathrm{n}+1) \leftarrow \operatorname{Rd}(\mathrm{n}), \mathrm{C} \leftarrow \operatorname{Rd}(7)$ | Z,C,N, V | 1 |
| ROR | Rd | Rotate Right Through Carry | $\operatorname{Rd}(7) \leftarrow \mathrm{C}, \mathrm{Rd}(\mathrm{n}) \leftarrow \operatorname{Rd}(\mathrm{n}+1), \mathrm{C} \leftarrow \operatorname{Rd}(0)$ | Z,C,N, V | 1 |
| ASR | Rd | Arithmetic Shift Right | $\operatorname{Rd}(\mathrm{n}) \leftarrow \operatorname{Rd}(\mathrm{n}+1), \mathrm{n}=0 . .6$ | Z,C,N, V | 1 |
| SWAP | Rd | Swap Nibbles | $\operatorname{Rd}(3.0) \leftarrow \operatorname{Rd}(7 . .4), \operatorname{Rd}(7 . .4) \leftarrow \operatorname{Rd}(3 . .0)$ | None | 1 |
| BSET | s | Flag Set | SREG(s) $\leftarrow 1$ | SREG(s) | 1 |
| BCLR | s | Flag Clear | SREG(s) $\leftarrow 0$ | SREG(s) | 1 |
| BST | Rr, b | Bit Store from Register to T | $\mathrm{T} \leftarrow \operatorname{Rr}(\mathrm{b})$ | T | 1 |
| BLD | Rd, b | Bit load from T to Register | $\operatorname{Rd}(\mathrm{b}) \leftarrow \mathrm{T}$ | None | 1 |
| SEC |  | Set Carry | $C \leftarrow 1$ | C | 1 |
| CLC |  | Clear Carry | $C \leftarrow 0$ | C | 1 |
| SEN |  | Set Negative Flag | $N \leftarrow 1$ | N | 1 |
| CLN |  | Clear Negative Flag | $\mathrm{N} \leftarrow 0$ | N | 1 |
| SEZ |  | Set Zero Flag | $\mathrm{Z} \leftarrow 1$ | Z | 1 |
| CLZ |  | Clear Zero Flag | $\mathrm{Z} \leftarrow 0$ | Z | 1 |
| SEI |  | Global Interrupt Enable | $1 \leftarrow 1$ | 1 | 1 |
| CLI |  | Global Interrupt Disable | $1 \leftarrow 0$ | 1 | 1 |
| SES |  | Set Signed Test Flag | $\mathrm{S} \leftarrow 1$ | S | 1 |
| CLS |  | Clear Signed Test Flag | $\mathrm{S} \leftarrow 0$ | S | 1 |
| SEV |  | Set Twos Complement Overflow. | $\mathrm{V} \leftarrow 1$ | V | 1 |
| CLV |  | Clear Twos Complement Overflow | $\mathrm{V} \leftarrow 0$ | V | 1 |

DRAWING NO. REV.

## Errata

## ATmega169 Rev E

ATmega169 Rev D

## ATmega169 Rev C

No known errata.

- High serial resistance in the glass can result in dim segments on the LCD
- IDCODE masks data from TDI input

2. High serial resistance in the glass can result in dim segments on the LCD

Some display types with high serial resistance ( $>20 \mathrm{k} \Omega$ ) inside the glass can result in dim segments on the LCD
Problem Fix/Workaround
Add a 1 nF ( 0.47 - 1.5 nF ) capacitor between each common pin and ground.

1. IDCODE masks data from TDI input

The JTAG instruction IDCODE is not working correctly. Data to succeeding devices are replaced by all-ones during Update-DR.

## Problem Fix / Workaround

- If ATmega169 is the only device in the scan chain, the problem is not visible.
- Select the Device ID Register of the ATmega169 by issuing the IDCODE instruction or by entering the Test-Logic-Reset state of the TAP controller to read out the contents of its Device ID Register and possibly data from succeeding devices of the scan chain. Issue the BYPASS instruction to the ATmega169 while reading the Device ID Registers of preceding devices of the boundary scan chain.
- If the Device IDs of all devices in the boundary scan chain must be captured simultaneously, the ATmega169 must be the fist device in the chain.
- High Current Consumption In Power Down when JTAGEN is Programmed
- LCD Contrast Control
- Some Data Combinations Can Result in Dim Segments on the LCD
- LCD Current Consumption
- IDCODE masks data from TDI input

5. High Current Consumption In Power Down when JTAGEN is Programmed The input buffer on TDO (PF6) is always enabled and the pull-up is always disabled when JTAG is programmed. This can leave the output floating.
Problem Fix/Workaround
Add external pull-up to PF6.
Unprogram the JTAGEN Fuse before shipping out the end product.
6. LCD Contrast Control

The contrast control is not working properly when using synchronous clock (chip clock) to obtain an LCD clock, and the chip clock is 125 kHz or faster.

## Problem Fix/Workaround

Use a low chip clock frequency ( 32 kHz ) or apply an external voltage to the LCDCAP pin.
3. Some Data Combinations Can Result in Dim Segments on the LCD

All segments connected to a common plane might be dimmed (lower contrast) when a certain combination of data is displayed.
Problem Fix/Workaround
Default waveform: If there are any unused segment pins, loading one of these with a 1 nF capacitor and always write ' 0 ' to this segment eliminates the problem.
Low power waveform: Add a 1 nF capacitor to each common pin.

## 2. LCD Current Consumption

In an interval where $\mathrm{V}_{\mathrm{CC}}$ is within the range VLCD -0.2 V to $\mathrm{VLCD}+0.4 \mathrm{~V}$, the LCD current consumption is up to three times higher than expected. This will only be an issue in Power-save mode with the LCD running as the LCD current is negligible compared to the overall power consumption in all other modes of operation.

## Problem Fix/Workaround

No known workaround.

## 1. IDCODE masks data from TDI input

The JTAG instruction IDCODE is not working correctly. Data to succeeding devices are replaced by all-ones during Update-DR.

## Problem Fix / Workaround

- If ATmega169 is the only device in the scan chain, the problem is not visible.
- Select the Device ID Register of the ATmega169 by issuing the IDCODE instruction or by entering the Test-Logic-Reset state of the TAP controller to read out the contents of its Device ID Register and possibly data from succeeding devices of the scan chain. Issue the BYPASS instruction to the ATmega169 while reading the Device ID Registers of preceding devices of the boundary scan chain.
- If the Device IDs of all devices in the boundary scan chain must be captured simultaneously, the ATmega169 must be the fist device in the chain.

## ATmega169 Rev B

- Internal Oscillator Runs at 4 MHz
- LCD Contrast Voltage is not Correct
- External Oscillator is Non-functional
- USART
- ADC Measures with Lower Accuracy than Specified
- Serial Downloading
- IDCODE masks data from TDI input

## 7. Internal Oscillator Runs at $4 \mathbf{M H z}$

The Internal Oscillator runs at 4 MHz instead of the specified 8 MHz . Therefore, all Flash/EEPROM programming times are twice as long as specified. This includes Chip Erase, Byte programming, Page programming, Fuse programming, Lock bit programming, EEPROM write from the CPU, and Flash Self-Programming.
For this reason, rev-B samples are shipped with the CKDIV8 Fuse unprogrammed.

## Problem Fix/Workaround

If 8 MHz operation is required, apply an external clock (this will be fixed in rev. C).

## 6. LCD Contrast Voltage is not Correct

The LCD contrast voltage between 1.8 V and 3.1 V is incorrect. When the $\mathrm{V}_{\mathrm{cc}}$ is between 1.8 V and 3.1 V , the LCD contrast voltage drops approx. 0.5 V . The current consumption in this interval is higher than expected.

## Problem Fix/Workaround

Contrast will be wrong, but display will still be readable, can be partly compensated for using the contrast control register (this will be fixed in rev. C).

## 5. External Oscillator is Non-functional

The external oscillator does not run with the setup described in the datasheet.
Problem Fix/Workaround
Use other clock source (this will be fixed in rev. C).

## Alternative Problem Fix/Workaround

Adding a pull-down on XTAL1 will start the Oscillator.
4. USART

Writing TXEN to zero during transmission causes the transmission to suddenly stop. The datasheet description tells that the transmission should complete before stopping the USART when TXEN is written to zero.

## Problem Fix/Workaround

Ensure that the transmission is complete before writing TXEN to zero (this will be fixed in rev. C).
3. ADC Measures with Lower Accuracy than Specified

The ADC does not work as intended. There is a positive offset in the result.

## Problem Fix/Workaround

This will be fixed in rev. C.
2. Serial downloading

When entering Serial Programming mode the second byte will not echo back as described in the Serial Programming algorithm.

## Problem Fix/Workaround

Check if the third byte echoes back to ensure that the device is in Programming mode (this will be fixed in rev. C).

## 1. IDCODE masks data from TDI input

The JTAG instruction IDCODE is not working correctly. Data to succeeding devices are replaced by all-ones during Update-DR.

Problem Fix / Workaround

- If ATmega169 is the only device in the scan chain, the problem is not visible.
- Select the Device ID Register of the ATmega169 by issuing the IDCODE instruction or by entering the Test-Logic-Reset state of the TAP controller to read out the contents of its Device ID Register and possibly data from succeeding devices of the scan chain. Issue the BYPASS instruction to the ATmega169 while reading the Device ID Registers of preceding devices of the boundary scan chain.
- If the Device IDs of all devices in the boundary scan chain must be captured simultaneously, the ATmega169 must be the fist device in the chain.

Datasheet Change Log for ATmega169

Changes from Rev. 2514J-12/03 to Rev. 2514K-04/04

Please note that the referring page numbers in this section are referring to this document. The referring revision in this section are referring to the document revision.

1. Changed size from $0 \times 60$ to $0 x F F$ in "Stack Pointer" on page 11.
2. Updated Table 17 on page 40, Table 21 on page 44 and Table 115 on page 267.
3. Updated "Calibrated Internal RC Oscillator" on page 27.
4. Added new "Power Reduction Register" on page 34. Examples found in "Using the Power Reduction Register" on page 312.
5. Fixed typo in port description for the "Analog to Digital Converter" on page 194.
6. Removed old and added new "LCD Controller" on page 212.
7. Updated "Electrical Characteristics" on page 300.
8. Updated "ATmega169 Typical Characteristics" on page 307.
9. Updated "Ordering Information" on page 14.

ATmega169L replaced by ATmega169V and ATmega169.

1. Updated "Calibrated Internal RC Oscillator" on page 27
2. Removed "Advance Information" from the datasheet.
3. Removed AGND from Figure 2 on page 3 and added "System Clock Prescaler" to Figure 11 on page 23.
4. Updated Table 16 on page 38, Table 17 on page 40, Table 19 on page 42 and Table 40 on page 70.
5. Renamed and updated "On-chip Debug System" to "JTAG Interface and On-chip Debug System" on page 36.
6. Updated COM01:0 to COM0A1:0 in "Timer/Counter Control Register A TCCR0A" on page 90 and COM21:0 to COM2A1:0 in "Timer/Counter Control Register A- TCCR2A" on page 136.
7. Updated "Test Access Port - TAP" on page 228 regarding JTAGEN.
8. Updated description for the JTD bit on page 237.
9. Added a note regarding JTAGEN fuse to Table 119 on page 270.
10. Updated Absolute Maximum Ratings* and DC Characteristics in "Electrical Characteristics" on page 300.
11. Updated "Errata" on page 17 and added a proposal for solving problems regarding the JTAG instruction IDCODE.

Changes from Rev. 2514G-04/03 to Rev. 2514H-05/03

Changes from Rev. 2514F-04/03 to Rev. 2514G-04/03

Changes from Rev. 2514E-02/03 to Rev. 2514F-04/03

Changes from Rev. 2514D-01/03 to Rev. 2514E-02/03

1. Updated typo in Figure 147, Figure 167, and Figure 194.
2. Updated "ATmega169 Typical Characteristics" on page 307.
3. Updated typo in "Ordering Information" on page 14.
4. Updated Figure 45 on page 110, Table 18 on page 40, and "Version" on page 235.
5. Renamed ICP to ICP1 in whole document.
6. Removed note on "Crystal Oscillator Operating Modes" on page 25.
7. XTAL1/XTAL2 can be used as timer oscillator pins, described in chapter "Calibrated Internal RC Oscillator" on page 27.
8. Switching between prescaler settings in "Switching Time" on page 31.
9. Updated DC and ACD Characteristics in chapter "Electrical Characteristics" on page 300 are updated. Removed TBD's from Table 16 on page 38, Table 19 on page 42, Table 134 on page 303.
10. Updated Figure 22 on page 53, Figure 25 on page 58 and Figure 109 on page 240 regarding WRITE PINx REGISTER.
11. Updated "Alternate Functions of Port F" on page $\mathbf{7 0}$ regarding JTAG.
12. Replaced Timer0 Overflow with Timer/CounterO Compare Match in "Universal Serial Interface - USI" on page 180. Also updated "Start Condition Detector" on page 186 and "USI Control Register - USICR" on page 188.
13. Updated Features for "Analog to Digital Converter" on page 194 and Table 88 on page 207.
14. Added notes on Figure 117 on page 261 and Table 118 on page 269.
15. Updated the section "Features" on page 1 with information regarding ATmega169 and ATmega169L.
16. Removed all references to the PG5 pin in Figure 1 on page 2, Figure 2 on page 3, "Port G (PG4..PGO)" on page 6, "Alternate Functions of Port G" on page 72, and "Register Description for I/O-Ports" on page 74.
17. Updated Table 118, "Extended Fuse Byte," on page 269.
18. Added Errata for "Datasheet Change Log for ATmega169" on page 20, including "Significant Data Sheet Changes".
19. Updated the "Ordering Information" on page 14 to include the new speed grade for ATmega169L and the new 16 MHz ATmega169.

Changes from Rev. 2514C-11/02 to Rev. 2514D-01/03

1. Added TCK frequency limit in "Programming via the JTAG Interface" on page 287.
2. Added Chip Erase as a first step in "Programming the Flash" on page 297 and "Programming the EEPROM" on page 298.
3. Added the section "Unconnected Pins" on page 57.
4. Added tips on how to disable the OCD system in "On-chip Debug System" on page 35.
5. Corrected interrupt addresses. ADC and ANA_COMP had swapped places.
6. Improved the table in "SPI Timing Characteristics" on page 303 and removed the table in "SPI Serial Programming Characteristics" on page 287.
7. Changed "will be ignored" to "must be written to zero" for unused Z-pointer bits in "Performing a Page Write" on page 262.
8. Corrected "LCD Frame Complete" to "LCD Start of Frame" in the LCDCRA Register description.
9. Changed OUT to STS and IN to LDS in USI code examples, and corrected $\mathrm{f}_{\text {ScKmax }}$. The USI I/O Registers are in the extended I/O space, so IN and OUT cannot be used. LDS and STS take one more cycle when executed, so $f_{\text {SCKmax }}$ had to be changed accordingly.
10. Removed TOSKON and TOSCK from Table 103 on page 241, and g10 and g20 from Figure 114 on page 243 and Table 105 on page 244, because these signals do not exist in boundary scan.
11. Changed from 4 to 16 MIPS and MHz in the device Features list.
12. Corrected Port A to Port F in "AVCC" on page 6 under "Pin Descriptions" on page 5.
13. Corrected 230.4 Mbps to 230.4 kbps in "Examples of Baud Rate Setting" on page 176.
14. Corrected placing of falling and rising XCK edges in Table 78, "UCPOL Bit Settings," on page 175.
15. Removed reference to Multipurpose Oscillator Application Note, which does not exist.
16. Corrected Number of Calibrated RC Oscillator Cycles in Table 1 on page 19 from 8,448 to 67,584.
17. Various minor Timer1 corrections.
18. Added information about PWM symmetry for Timer0 and Timer2.
19. Corrected the contents of DIDR0 and DIDR1.
20. Made all bit names in the LCDDR Registers unique by adding the COM number digit in front of the two digits already there, e.g. SEG304.
21. Changed Extended Standby to ADC Noise Reduction mode under "Asynchronous Operation of Timer/Counter2" on page 140.
22. Added note about Port $B$ having better driving capabilities than the other ports. As a consequence the table, "DC Characteristics" on page 300 was corrected as well.
23. Added note under "Filling the Temporary Buffer (Page Loading)" on page 262 about writing to the EEPROM during an SPM page load.
24. Removed ADHSM completely.
25. Updated "Packaging Information" on page 15.

Changes from Rev. 2514B-09/02 to Rev. 2514C-11/02

Changes from Rev. 2514A-08/02 to Rev. 2514B-09/02

1. Added "Errata" on page 17.
2. Added Information for the $64-$ pad MLF Package in "Ordering Information" on page 14 and "Packaging Information" on page 15.
3. Changed Temperature Range and Removed Industrial Ordering Codes in "Packaging Information" on page 15.
4. Changed the Endurance on the Flash to $\mathbf{1 0 , 0 0 0}$ Write/Erase Cycles.
