

Features

- 10 kV – ESD Protection
- Two Comparators with Common Reference
- Tight Threshold Tolerance
- Constant Threshold
- NPN Output
- Interference and Damage-protection According to VDE 0839 and ISO/CD 7637 EMI Protection
- Reversal Polarity Protection
- Load-dump Protection

Current Monitor IC

U4793B

1. Description

The bipolar U4793B is designed to monitor overload or a short circuit in automotive or industrial applications. The threshold is tied to $V_{4,6} = V_S - V_T$ where $V_T = 44.5$ mV. It is independent of the supply voltage, V_S . If the voltage drop across shunt resistor, R_{sh} , exceeds this value, the output is turned on, otherwise the output is turned off.

Without supply voltage or open input pin 8, the output is turned off. The output break-down voltage is determined by the Z-diodes Z_3 and Z_5 with a typical value of $V_Z = 22$ V.

An unused comparator input must be connected to pin 7.

4. Absolute Maximum Ratings

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
