

Features & Benefits

- Complete kits for fiber optic terminations
- Kits for most industry standard connectors
- Quick and consistent terminations
- Unique tools support Molex practices
 - Curing oven with individually timed nests
 - Precision cleave tool - controlled fiber lengths
 - Constant pressure polishing tool

The true measure of a fiber optic connector's performance is in the terminated state. For this reason, Molex has expended a great deal of engineering talent and resources developing the termination processes and tooling required to terminate fiber optic connectors. The result of this effort is a unique set of tools and procedures for quick, reliable and consistent terminations.

The Molex termination tool kit provides all the tools necessary to terminate a variety of industry standard fiber optic connectors. Packaged in a durable carrying case, the kit contains the necessary polishing pads, stripping and crimping tools and enough consumables to terminate approximately 50 connectors. Additionally, the kit contains a unique curing oven, cleave tool and polishing fixture for repeatable results with minimal training.

Curing Oven

The Molex curing oven is designed to maximize operator output by eliminating the need for batch curing. It has either 6 (simplex connectors) or 2 (duplex connectors) independently controlled cavities and a curing cycle of 5 minutes. A connector placed in a cavity activates a timer in that cavity which then signals the completion of a curing cycle by lighting a red LED and sounding a buzzer.

Cleave Tool

The Molex cleave tool is designed to repeatedly and accurately cleave the fiber at a controlled length just above the surface of the ferrule. This eliminates the need for a bead of epoxy and extensive operator training. The result is a substantial reduction in polishing time and a significant improvement in production yield.

Polishing Fixture

Consistent and repeatable PC (physical contact) terminations are easily achieved with the constant pressure Molex polishing tool. The fixture incorporates a spring loaded nest that provides uniform downward pressure on the ferrule tip. With this feature, operator variability is virtually eliminated.

Standard Part Numbers

Order Number	Description
86710-0000	ST* termination tool kit with 110V curing oven
86711-0000	ST termination tool kit with 220V curing oven
86713-0000	STII† termination tool kit with 110V curing oven
86714-0000	STII termination tool kit with 220V curing oven
86753-0000	FC termination tool kit with 110V curing oven
86754-0000	FC termination tool kit with 220V curing oven
86763-0000	SC termination tool kit with 110V curing oven
86764-0000	SC termination tool kit with 220V curing oven
86755-0000	FC, APC termination tool kit with 110V curing oven
86756-0000	FC, APC termination tool kit with 220V curing oven
86765-0000	SC, APC termination tool kit with 110V curing oven
86766-0000	SC, APC termination tool kit with 220V curing oven
86720-0000	SMA termination tool kit with 110V curing oven
86721-0000	SMA termination tool kit with 220V curing oven
86730-0000	FDDI termination tool kit with 110V curing oven
86731-0000	FDDI termination tool kit with 220V curing oven
86740-0000	ESCON‡ termination tool kit with 110V curing oven
86741-0000	ESCON termination tool kit with 220V curing oven
