

# MP5505A

7V, 4A, High-Efficiency Energy Storage and Management Unit

### DESCRIPTION

MP5505A is a lossless energy storage and management unit • Wide 2.7V to 7V Operating Input Range targeted at solid-state and hard-disk drive applications. Its • Input-Current Limiter with Integrated 60mΩ MOSFET highly integrated input-current limit and energy storage and · Up to 4.5A Input-Current Limit release management makes the system solution very · Reverse-Current Protection compact.

The internal input-current-limit block with dv/dt control • Power-On-Reset prevents inrush current during system start-up; the bus · Adjustable dv/dt Slew Rate for Bus Voltage Start-Up voltage start-up slew rate is programmable. Also, it includes a · Internal 30mΩ Disconnect Switch power-on-reset function for hot-swapping. MPS' patented • Internal 70mΩ and 60mΩ Power Switches for Energy Storage energy storage and release management control circuit and Release Management Circuits minimizes the storage capacitor requirement. It pumps the · Thermal Protection input voltage to a higher storage voltage and releases the . EN and Power Good Indicators energy over a hold-up time to the system in the case of an • Available in a QFN-20 (3mm×4mm) Package input outage. The storage voltage and the release voltage are both programmable for different system applications. The MP5505A requires a minimal number of readily available,

standard, external components and is available in a QFN-20 (3mm×4mm) package.

# **FEATURES**

- · 6V Bus-Clamping Voltage

#### APPLICATIONS

- Solid-State Drives
- Hard-Disk Drives
- Power Back-Up/Battery Hold-Up Supplies

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems. Inc

## TYPICAL APPLICATION
