 - Capture buffers, comparators, and logic are becoming much smaller than bonding pads
 - Full access and debug even in very tight spaces
- ▶ Eliminates timing, loading, and drive issues
 - Target IS the actual MCU not just an emulated equivalent
 - Capture buffer and logic are the same as the target MCU so no marginal timing
- ▶ Emulate at full target speed and with all target circuitry including crystal components
- ▶ No issues with temperature or voltage
- ▶ Eliminates expensive external emulator box and interconnect
