3.3 V ECL/PECL/HSTL/LVDS ÷2/4, ÷4/6 Clock Generation Chip

The MC100ES6039 is a low skew $\div 2/4$, $\div 4/6$ clock generation chip designed explicitly for low skew clock generation applications. The internal dividers are synchronous to each other, therefore, the common output edges are all precisely aligned. The device can be driven by either a differential or single-ended ECL or, if positive power supplies are used, LVPECL input signals. In addition, by using the V_{BB} output, a sinusoidal source can be AC coupled into the device.

The common enable $(\overline{\text{EN}})$ is synchronous so that the internal dividers will only be enabled/disabled when the internal clock is already in the LOW state. This avoids any chance of generating a runt clock pulse on the internal clock when the device is enabled/disabled as can happen with an asynchronous control. The internal enable flip-flop is clocked on the falling edge of the input clock, therefore, all associated specification limits are referenced to the negative edge of the clock input.

Upon startup, the internal flip-flops will attain a random state; therefore, for systems which utilize multiple ES6039s, the master reset (MR) input must be asserted to ensure synchronization. For systems which only use one ES6039, the MR pin need not be exercised as the internal divider design ensures synchronization between the $\pm 2/4$ and the $\pm 4/6$ outputs of a single device. All V_{CC} and V_{EE} pins must be externally connected to power supply to guarantee proper operation.

The 100ES Series contains temperature compensation.

Features

- Maximum Frequency >1.0 GHz Typical
- 50 ps Output-to-Output Skew
- PECL Mode Operating Range: V_{CC} = 3.135 V to 3.8 V with V_{EE} = 0 V
- ECL Mode Operating Range: V_{CC} = 0 V with V_{EE} = -3.135 V to -3.8 V
- · Open Input Default State
- · Synchronous Enable/Disable
- · Master Reset for Synchronization of Multiple Chips
- V_{BB} Output
- LVDS and HSTL Input Compatible
- · 20-Lead Pb-Free Package Available

^{1.} MC100ES6139 circuits are designed to meet the DC specifications shown in the above table after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse airflow greater than 500 lfpm is maintained.

^{2.} All loading with 50 Ω to $\mbox{V}_{\mbox{CC}}\mbox{--}2.0$ volts.

^{3.} V_{PP} (DC) is the minimum differential input voltage swing required to maintain device functionality.

^{4.} V_{CMR} (DC) is the crosspoint of the differential input signal. Functional operation is obtained when the crosspoint is within the V_{CMR} (DC) range and the input swing lies within the V_{PP} (DC) specification.

Table 6. AC Characteristics ($V_{CC} = 0 \text{ V}, V_{EE} = -3.8 \text{ V} \text{ to } -3.135 \text{ V} \text{ or } V_{CC} = 3.135 \text{ V} \text{ to } 3.8 \text{ V}, V_{EE} = 0 \text{ V})$ ⁽¹⁾

PACKAGE DIMENSIONS

NOTES:

- 1. DIMENSIONS ARE IN MILLIMETERS.
- 2. DIMENSIONING AND TOLERANCING PER ASME Y14.5M-1994.
- 3. DATUMS A AND B TO BE DETERMINED AT THE PLANE WHERE THE BOTTOM OF THE LEADS EXIT THE PLASTIC BODY.

 \cancel{A} This dimension does not include mold flash, protrusion or gate burrs. Mold FLASH, PROTRUSION OR GATE BURRS SHALL NOT EXCEED 0.15 MM PER SIDE. THIS DIMENSION IS DETERMINED AT THE PLANE WHERE THE BOTTOM OF THE LEADS EXIT THE PLASTIC BODY.

/Ś.\ THIS DIMENSION DOES NOT INCLUDE INTER-LEAD FLASH OR PROTRUSIONS. INTER-LEAD FLASH AND PROTRUSIONS SHALL NOT EXCEED 0.25 MM PER SIDE. THIS DIMENSION IS DETERMINED AT THE PLANE WHERE THE BOTTOM OF THE LEADS EXIT THE PLASTIC BODY.

/6\ THIS DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED 0.62 mm.
