## MPC823FADS : MPC823 Family Application Development System

The MPC823 Family Application Development System consists of an MPC8xxFADS Motherboard (MPC8xxFADSMB) and an MPC823FADS Daughterboard (MPC823FADSDB).

### MPC823FADS Features

The MPC823 Family Application Development Motherboard supports porting and application and software development for the MPC8xx family of embedded microprocessors. A FADS daughterboard that operates in conjunction with the MPC8xxFADS Motherboard is offered for each MPC8xx microprocessor.

The MPC823FADS daughterboard provides support specifically for the MPC823. It provides the following interfaces: RGB, composite, and S-Video connectors, Type A and B USB connectors, 4-bit per color LCD panel connection support, and general high-density logic analyzer connectors for HP16500 Series logic analyzers.

A copy of the Freescale MPC8bug debugger is included with the MPC823FADS. You will need an ADI card and parallel ribbon cable that plugs into a SUN4 workstation or PC host to run MPC8bug.

The MPC823FADS development system does not include an ADI card. Please order MPC860ADI-PC to purchase an ADI card configured for the PC or MPC860ADI-SUN for a Sun4 workstation-compatible ADI card.

Neither the SDS monitor, which communicates with the SDS SingleStep Lite Debugger, nor the Debugger itself, are currently included with the 823FADS. Please contact Wind River Systems for more information regarding the SDS Monitor and Debugger. (<http://www.windriver.com/products/html/singlestep.html>)

Select the appropriate MPC823 Application Development System documentation you need from the motherboard and daughterboard pages (links below). The Engineering (ENG) Revision is the first generation, first operational prototype; and the Pilot Revision (PILOT) is the second generation release.
