

July 1989 Revised November 1999

# 74ACQ244 • 74ACTQ244 Quiet Series™ Octal Buffer/Line Driver with 3-STATE Outputs

### **General Description**

The ACQ/ACTQ244 is an octal buffer and line driver designed to be employed as a memory address driver, clock driver and bus oriented transmitter or receiver which provides improved PC board density. The ACQ/ACTQ utilizes Fairchild Quiet Series™ technology to guarantee quiet output switching and improved dynamic threshold performance. FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

#### **Features**

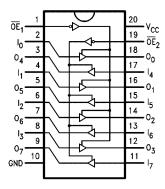

- I<sub>CC</sub> and I<sub>OZ</sub> reduced by 50%
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Guaranteed pin-to-pin skew AC performance
- Improved latch-up immunity
- 3-STATE outputs drive bus lines or buffer memory address registers
- Outputs source/sink 24 mA
- Faster prop delays than the standard AC/ACT244

# **Ordering Code:**

| Order Number | Package Number | Package Description   |  |  |  |
|--------------|----------------|---|--|--|--|
| 74ACQ244SC   | M20B           | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide Body |  |  |  |
| 74ACQ244SJ   | M20D           | 0-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide                    |  |  |  |
| 74ACQ244PC   | N20A           | 20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide          |  |  |  |
| 74ACTQ244SC  | M20B           | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide Body |  |  |  |
| 74ACTQ244SJ  | M20D           | 20-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide                   |  |  |  |
| 74ACTQ244QSC | MQA20          | 20-Lead Quarter Size Outline Package (QSOP), JEDEC MO-137, 0.150" Wide          |  |  |  |
| 74ACTQ244MSA | MSA20          | 20-Lead Shrink Small Outline Package (SSOP), EIAJ TYPE II, 5.3mm Wide           |  |  |  |
| 74ACTQ244PC  | N20A           | 20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide          |  |  |  |

Device also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

# **Absolute Maximum Ratings**(Note 1)

Supply Voltage ( $V_{CC}$ ) -0.5V to +7.0V

DC Input Diode Current (I<sub>IK</sub>)

 $\begin{array}{c} \text{V}_{\text{I}} = -0.5 \text{V} & -20 \text{ mA} \\ \text{V}_{\text{I}} = \text{V}_{\text{CC}} + 0.5 \text{V} & +20 \text{ mA} \\ \text{DC Input Voltage (V}_{\text{I}}) & -0.5 \text{V to V}_{\text{CC}} + 0.5 \text{V} \end{array}$ 

DC Output Diode Current (I<sub>OK</sub>)

$$\begin{split} \text{V}_{\text{O}} &= -0.5 \text{V} & -20 \text{ mA} \\ \text{V}_{\text{O}} &= \text{V}_{\text{CC}} + 0.5 \text{V} & +20 \text{ mA} \end{split}$$

DC Output Voltage ( $V_O$ ) -0.5V to  $V_{CC} + 0.5V$ 

DC Output Source

or Sink Current ( $I_O$ )  $\pm 50 \text{ mA}$ 

DC V<sub>CC</sub> or Ground Current

per Output Pin (I  $_{\rm CC}$  or I  $_{\rm GND}$ )  $\pm 50$  mA Storage Temperature (T  $_{\rm STG}$ )  $-65^{\circ}{\rm C}$  to  $+150^{\circ}{\rm C}$ 

DC Latch-Up Source or

Sink Current ±300 mA

Junction Temperature (T <sub>J</sub>)

PDIP 140°C

# Recommended Operating Conditions

Supply Voltage (V<sub>CC</sub>)

 $\begin{array}{ccc} ACQ & 2.0V \text{ to } 6.0V \\ ACTQ & 4.5V \text{ to } 5.5V \\ \text{Input Voltage (V_I)} & 0V \text{ to } V_{CC} \\ \text{Output Voltage (V_O)} & 0V \text{ to } V_{CC} \\ \end{array}$ 

Operating Temperature ( $T_A$ ) Minimum Input Edge Rate  $\Delta V/\Delta t$ 

ACQ Devices

 $V_{\mbox{\footnotesize{IN}}}$  from 30% to 70% of  $V_{\mbox{\footnotesize{CC}}}$ 

V<sub>CC</sub> @ 3.0V, 4.5V, 5.5V 125 mV/ns

Minimum Input Edge Rate  $\Delta V/\Delta t$ 

ACTQ Devices V<sub>IN</sub> from 0.8V to 2.0V

V<sub>CC</sub> @ 4.5V, 5.5V

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation of FACT™ circuits outside databook specifications.

### **DC Electrical Characteristics for ACQ**

| Symbol          | Parameter                     | Тур | Units | Conditions             |
|-----------------|-------------------------------|-----|-------|------------------------|
| C <sub>IN</sub> | Input Capacitance             | 4.5 | pF    | V <sub>CC</sub> = OPEN |
| C <sub>PD</sub> | Power Dissipation Capacitance | 70  | pF    | $V_{CC} = 5.0V$        |

#### **FACT Noise Characteristics**

The setup of a noise characteristics measurement is critical to the accuracy and repeatability of the tests. The following is a brief description of the setup used to measure the noise characteristics of FACT.

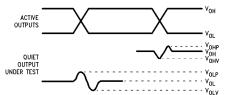

#### Equipment:

Hewlett Packard Model 8180A Word Generator PC-163A Test Fixture

Tektronics Model 7854 Oscilloscope

#### Procedure:

- 1. Verify Test Fixture Loading: Standard Load 50 pF,  $500\Omega$ .
- Deskew the HFS generator so that no two channels have greater than 150 ps skew between them. This requires that the oscilloscope be deskewed first. It is important to deskew the HFS generator channels before testing. This will ensure that the outputs switch simultaneously.
- Terminate all inputs and outputs to ensure proper loading of the outputs and that the input levels are at the correct voltage.
- Set the HFS generator to toggle all but one output at a frequency of 1 MHz. Greater frequencies will increase DUT heating and effect the results of the measurement.
- Set the HFS generator input levels at 0V LOW and 3V HIGH for ACT devices and 0V LOW and 5V HIGH for AC devices. Verify levels with an oscilloscope.

Note 17:  $V_{OHV}$  and  $V_{OLP}$  are measured with respect to ground reference Note 18: Input pulses have the following characteristics: f = 1 MHz,  $t_r = 3$  ns,  $t_f = 3$  ns, skew < 150 ps.

FIGURE 1. Quiet Output Noise Voltage Waveforms

#### V<sub>OLP</sub>/V<sub>OLV</sub> and V<sub>OHP</sub>/V <sub>OHV</sub>:

- Determine the quiet output pin that demonstrates the greatest noise levels. The worst case pin will usually be the furthest from the ground pin. Monitor the output voltages using a 50Ω coaxial cable plugged into a standard SMB type connector on the test fixture. Do not use an active FET probe.
- Measure V<sub>OLP</sub> and V<sub>OLV</sub> on the quiet output during the worst case active and enable transition. Measure V<sub>OHP</sub> and V<sub>OHV</sub> on the quiet output during the worst case active and enable transition.
- Verify that the GND reference recorded on the oscilloscope has not drifted to ensure the accuracy and repeatability of the measurements.

#### V<sub>ILD</sub> and V<sub>IHD</sub>:

- Monitor one of the switching outputs using a  $50\Omega$  coaxial cable plugged into a standard SMB type connector on the test fixture. Do not use an active FET probe.
- First increase the input LOW voltage level, V<sub>IL</sub>, until the output begins to oscillate or steps out a min of 2 ns. Oscillation is defined as noise on the output LOW level that exceeds V<sub>IL</sub> limits, or on output HIGH levels that exceed V<sub>IH</sub> limits. The input LOW voltage level at which oscillation occurs is defined as V<sub>ILD</sub>.
- Next decrease the input HIGH voltage level, V<sub>IH</sub>, until the output begins to oscillate or steps out a min of 2 ns. Oscillation is defined as noise on the output LOW level that exceeds V<sub>IL</sub> limits, or on output HIGH levels that exceed V<sub>IH</sub> limits. The input HIGH voltage level at which oscillation occurs is defined as V<sub>IHD</sub>.
- Verify that the GND reference recorded on the oscilloscope has not drifted to ensure the accuracy and repeatability of the measurements.

20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide Body Package Number M20B

20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide Package Number N20A

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
