FAIRCHILD

SEMICONDUCTOR

74F158A Quad 2-Input Multiplexer

General Description

The F158A is a high speed quad 2-input multiplexer. It selects four bits of data from two sources using the common Select and Enable inputs. The four outputs present the selected data in the inverted form. The F158A can also generate any four of the 16 different functions of two variables.

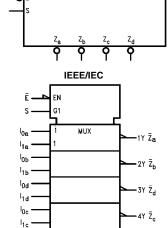

Ordering Code:

| Order Number | Package Number | Package Description |
|-----------------------|----------------|--|
| 74F158ASC (Note 1) | M16A | 16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow |
| 74F158ASJ | M16D | 16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide |
| 74F158APC | N16E | 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide |

Note 1: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

L = LOW Voltage Level

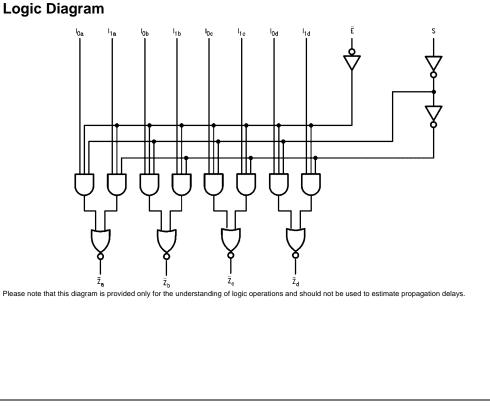

$$\label{eq:constant} \begin{split} & X = Immaterial \\ & \overline{Z}_n = \overline{E} \times (I_{1n}S + I_{0n} \ \overline{S}) \end{split}$$

The F158A quad 2-input multiplexer selects four bits of data from two sources under the control of a common Select input (S) and presents the data in inverted form at

the four outputs. The Enable input (\overline{E}) is active LOW. When \overline{E} is HIGH, all of the outputs (\overline{Z}) are forced HIGH regardless of all other inputs. The F158A is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input.

Functional Description

A common use of the F158A is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The F158A can generate four functions of two variables with one variable common. This is useful for implementing gating functions.

Absolute Maximum Ratings(Note 2)

| Storage Temperature | $-65^{\circ}C$ to $+150^{\circ}C$ |
|---|--------------------------------------|
| Ambient Temperature under Bias | $-55^{\circ}C$ to $+125^{\circ}C$ |
| Junction Temperature under Bias | $-55^{\circ}C$ to $+150^{\circ}C$ |
| V _{CC} Pin Potential to Ground Pin | -0.5V to +7.0V |
| Input Voltage (Note 3) | -0.5V to +7.0V |
| Input Current (Note 3) | -30 mA to +5.0 mA |
| Voltage Applied to Output | |
| in HIGH State (with $V_{CC} = 0V$) | |
| Standard Output | –0.5V to V _{CC} |
| 3-STATE Output | -0.5V to +5.5V |
| Current Applied to Output | |
| in LOW State (Max) | twice the rated I _{OL} (mA) |
| ESD Last Passing Voltage (Min) | 4000V |
| | |

Recommended Operating Conditions

Free Air Ambient Temperature Supply Voltage 74F158A

0°C to +70°C +4.5V to +5.5V

Note 2: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

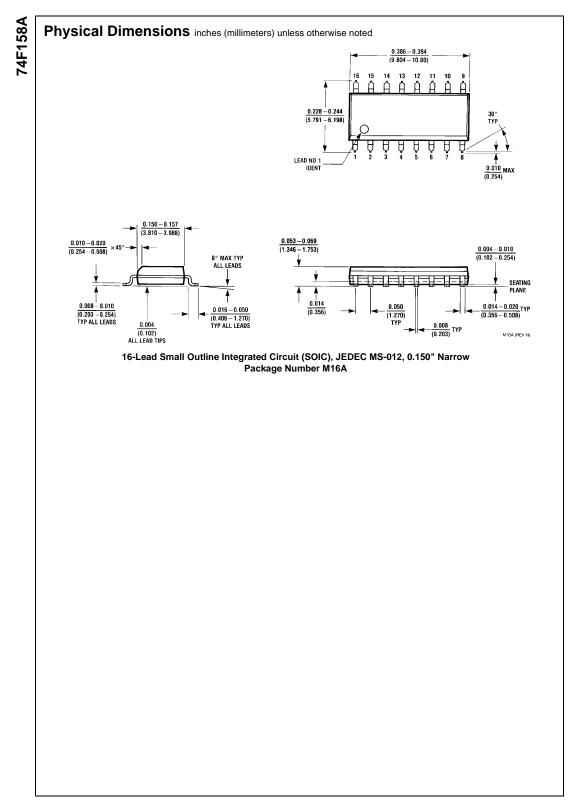

Note 3: Either voltage limit or current limit is sufficient to protect inputs.

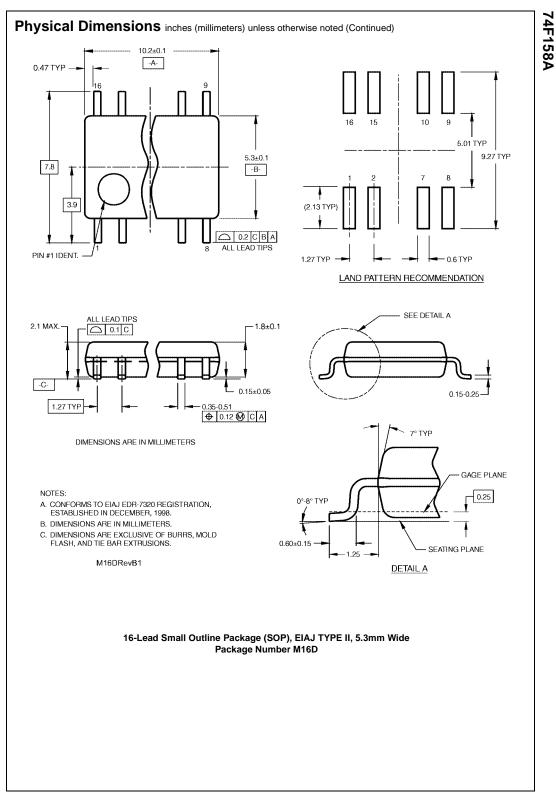

DC Electrical Characteristics

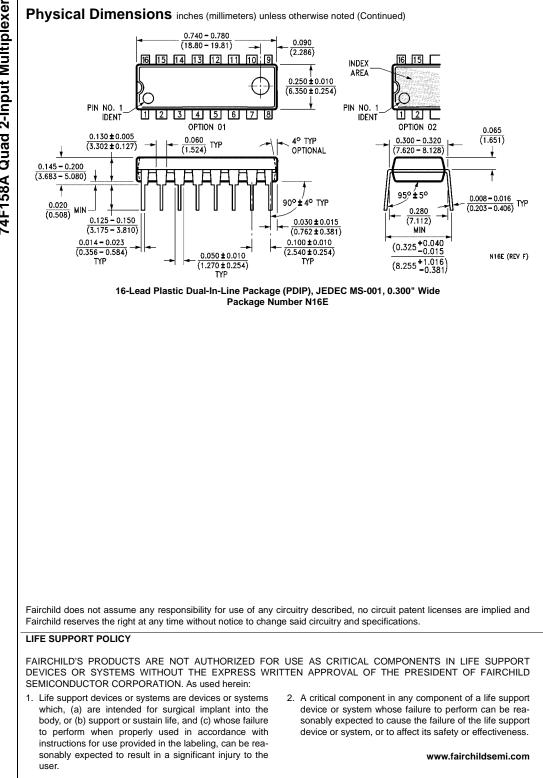

| Symbol | Parameter | | Min | Тур | Max | Units | Vcc | Conditions | |
|------------------|------------------------------|---------------------|------|-----|------|-------|-------|-----------------------------|--|
| VIH | Input HIGH Voltage | | 2.0 | | | V | | Recognized as a HIGH Signal | |
