## 74F398 • 74F399 Quad 2-Port Register

#### **General Description**

The 74F398 and 74F399 are the logical equivalents of a quad 2-input multiplexer feeding into four edge-triggered flip-flops. A common Select input determines which of the two 4-bit words is accepted. The selected data enters the flip-flops on the rising edge of the clock. The 74F399 is the 16-pin version of the 74F398, with only the Q outputs of the flip-flops available.

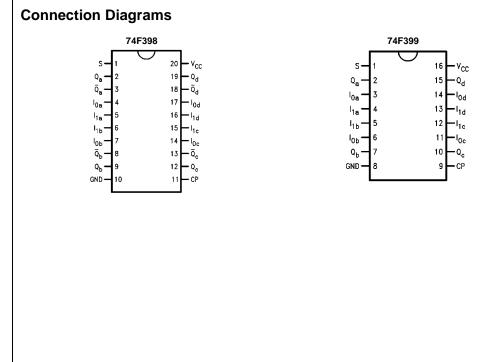

#### Features

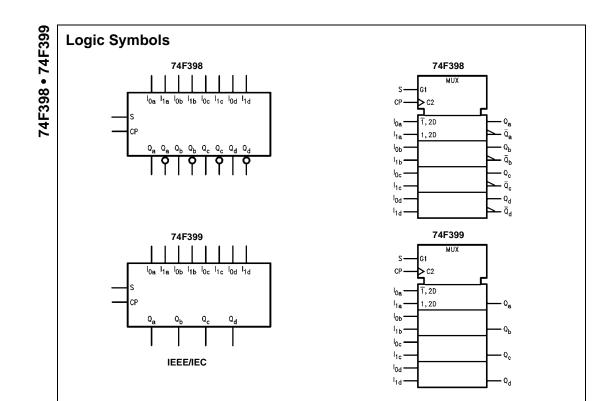

- Select inputs from two data sources
- Fully positive edge-triggered operation
- Both true and complement outputs—74F398

#### **Functional Description**

The 74F398 and 74F399 are high-speed quad 2-port registers. They select four bits of data from either of two sources (Ports) under control of a common Select input (S). The selected data is transferred to a 4-bit output register synchronous with the LOW-to-HIGH transition of the Clock input (CP). The 4-bit D-type output register is fully edgetriggered. The Data inputs  $(I_{0x},\ I_{1x})$  and Select input (S) must be stable only a setup time prior to and hold time after the LOW-to-HIGH transition of the Clock input for predictable operation. The 74F398 has both Q and  $\overline{Q}$  outputs.
