### 74F545 Octal Bidirectional Transceiver with 3-STATE Outputs

#### **General Description**

FAIRCHILD

SEMICONDUCTOR

The 74F545 is an 8-bit, 3-STATE, high-speed transceiver. It provides bidirectional drive for bus-oriented microprocessor and digital communications systems. Straight through bidirectional transceivers are featured, with 24 mA bus drive capability on the A Ports and 64 mA bus drive capability on the B Ports.

One input, Transmit/Receive  $(T/\overline{R})$  determines the direction of logic signals through the bidirectional transceiver. Transmit enables data from A-to-B Ports; Receive enables data from B-to-A Ports. The Output Enable input disables both A and B Ports by placing them in a 3-STATE condition.

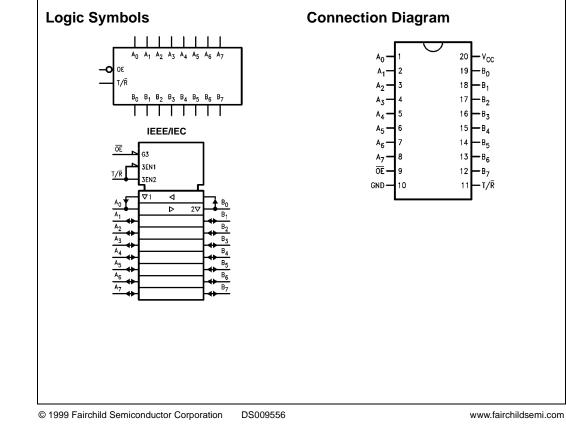

#### Features

- Higher drive than 8304
- 8-bit bidirectional data flow reduces system package count
- 3-STATE inputs/outputs for interfacing with bus-oriented systems
- 24 mA and 64 mA bus drive capability on A and B Ports, respectively
- Transmit/Receive and Output Enable simplify control logic
- Guaranteed 4000V minimum ESD protection
