#### 74LCX32244

# Low Voltage 32-Bit Buffer/Line Driver with 5V Tolerant Inputs and Outputs

#### **General Description**

The LCX32244 contains thirty-two non-inverting buffers with 3-STATE outputs designed to be employed as a memory and address driver, clock driver, or bus oriented transmitter/receiver. The device is nibble controlled. Each nibble has separate 3-STATE control inputs which can be shorted together for full 32-bit operation.

The LCX32244 is designed for low voltage (2.5V or 3.3V)  $V_{CC}$  applications with capability of interfacing to a 5V signal environment.

The LCX32244 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

#### **Features**

- 5V tolerant inputs and outputs
- 2.3V-3.6V V<sub>CC</sub> specifications provided
- 4.5 ns  $t_{PD}$  max ( $V_{CC} = 3.0V$ ), 20  $\mu$ A  $I_{CC}$  max
- Power down high impedance inputs and outputs
- Supports live insertion/withdrawal (Note 1)
- $\pm$ 24 mA output drive ( $V_{CC} = 3.0V$ )
- Uses patented noise/EMI reduction circuitry
- Latch-up performance exceeds 500 mA
- ESD performance:

Human body model > 2000V

Machine model > 200V

■ Packaged in plastic Fine-Pitch Ball Grid Array (FBGA)

Note 1: To ensure the high-impedance state during power up or down  $\overline{\text{OE}}$  should be tied to  $V_{CC}$  through a pull-up resistor: the minimum value or the resistor is determined by the current-sourcing capability of the driver.

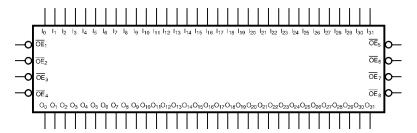

#### **Ordering Code:**

Order Number	Package Number	Package Description
74LCX32244G (Note 2)(Note 3)	BGA96A	96-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide

Note 2: Ordering code "G" indicates Trays.

Note 3: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

#### **Functional Description**

The LCX32244 contains thirty-two non-inverting buffers with 3-STATE standard outputs. The device is nibble (4-bits) controlled with each nibble functioning identically, but independent of the other. The control pins can be shorted together to obtain full 32-bit operation. The 3-STATE outputs are controlled by an Output Enable  $(\overline{OE}_n)$ input for each nibble. When  $\overline{OE}_n$  is LOW, the outputs are in 2-state mode. When  $\overline{OE}_n$  is HIGH, the outputs are in the high impedance mode, but this does not interfere with entering new data into the inputs.

		$V_{CC} = 2.7V - 3.0V$ $V_{CC} = 2.3V - 2.7V$		±12	mA
		$V_{CC} = 2.3V - 2.7V$		±8	
T <sub>A</sub>	Free-Air Operating Temperature		-40	85	°C
Δt/ΔV	Input Edge Rate, V <sub>IN</sub> = 0.8V–2.0V, V <sub>CC</sub> = 3.0V		0	10	ns/V

Note 4: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 5: I<sub>O</sub> Absolute Maximum Rating must be observed.

Note 6: Unused inputs must be held HIGH or LOW. They may not float.

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- 2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
