CD4001BC/CD4011BC Quad 2-Input NOR Buffered B Series Gate • Quad 2-Input NAND Buffered B Series Gate

General Description

The CD4001BC and CD4011BC quad gates are monolithic complementary MOS (CMOS) integrated circuits constructed with N- and P-channel enhancement mode transistors. They have equal source and sink current capabilities and conform to standard B series output drive. The devices also have buffered outputs which improve transfer characteristics by providing very high gain.

All inputs are protected against static discharge with diodes to $\rm V_{DD}$ and $\rm V_{SS}.$

Features

■ Low power TTL:

temperature range

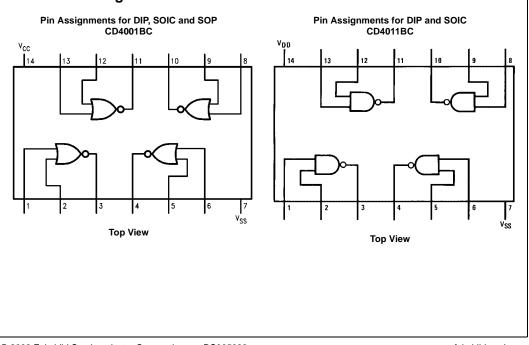

■ 5V-10V-15V parametric ratings

Symmetrical output characteristics

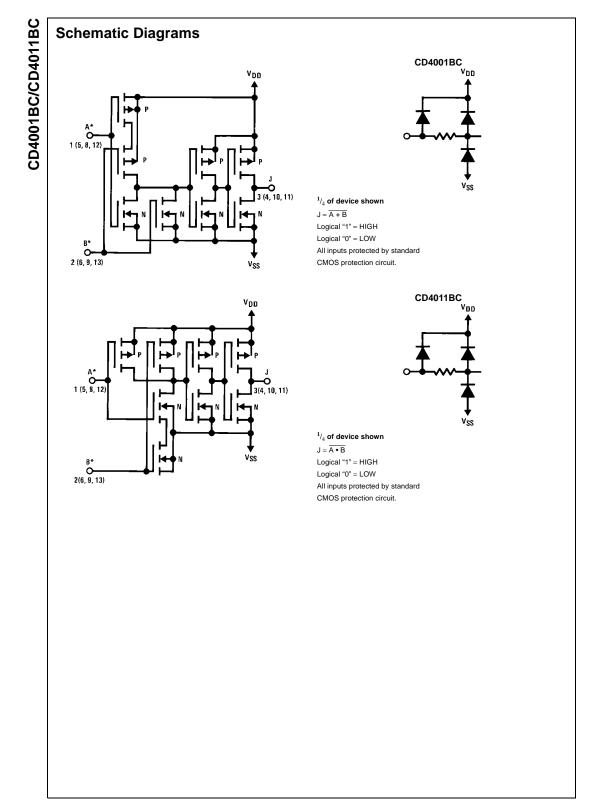

■ Maximum input leakage 1 µA at 15V over full

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.
