DM74LS377 Octal D-Type Flip-Flop with Common Enable and Clock

General Description

Features

The DM74LS377 is an 8-bit register built using advanced low power Schottky technology. This register consists of eight D-type flip-flops with a buffered common clock and a buffered common input enable. The device is packaged in the space-saving (0.3 inch row spacing) 20-pin package. 8-bit high speed parallel registers

- Positive edge-triggered D-type flip-flops
- Fully buffered common clock and enable inputs

Functional Description

The DM74LS377 consists of eight edge-triggered D flip-flops with individual D inputs and Q outputs. The Clock (CP) and Enable input (\overline{E}) are common to all flip-flops.

When \overline{E} is LOW, new data is entered into the register on the next LOW-to-HIGH transition of CP. When \overline{E} is HIGH, the register will retain the present data independent of the CP.

Absolute Maximum Ratings(Note 1)

Supply Voltage	7V
Input Voltage	7V
Operating Free Air Temperature Range	$0^{\circ}C$ to $+70^{\circ}C$
Storage Temperature Range	-65°C to +150°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
