## FHP3392 — Fixed－Gain，$\pm 5$ V，Triple 2：1，High－Speed Video Multiplexer

## Features

－ 0.1 dB gain flatness to 102 MHz at $2 \mathrm{~V}_{\mathrm{PP}}$
－9ns channel switching time
－$<0.02 \% / 0.03^{\circ}$ differential gain／phase error
－ 750 MHz large signal -3 dB bandwidth
－ $2,600 \mathrm{~V} / \mu$ s slew rate
－ 60 mA output current（easily drives two video loads）
－ 70 dB channel to channel isolation
－ 25 mA supply current
－ 7 mA supply current when disabled
－Fully specified at $\pm 5 \mathrm{~V}$ supplies
－Lead－free TSSOP－24 package

## Applications

－RGB video switchers and routers
－Multiple input HDTV switching
－Picture－in－picture video switch
－Multi－channel ADC Driver

## Description

The FHP3392 $(\mathrm{G}=2)$ is a triple 2：1 analog multiplexer designed for high－speed video applications．The output amplifiers offer a fixed gain of 6 dB and stellar large signal performance of $335 \mathrm{MHz}-3 \mathrm{~dB}$ bandwidth and $80 \mathrm{MHz} \quad 0.1 \mathrm{~dB}$ bandwidth．The $2 \mathrm{~V}_{\mathrm{PP}}$ bandwidth performance and $1,600 \mathrm{~V} / \mu$ s slew rate exceed the requirements of high－definition television（HDTV）and other multimedia applications．The output amplifier provides ample output current to drive multiple video loads．

The FHP3392 may be operated with dual power supplies from $\pm 2.5 \mathrm{~V}$ to $\pm 6 \mathrm{~V}$ ．

The FHP3392 consumes only 25 mA of supply current and offer disable capability．While disabled，it consumes only 7 mA and the outputs become high impedance，allowing multiplexer expansion with multiple FHP3392s．

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.
