## **Package Outlines**

### **General Description**

It is an advanced samart power module(SPM<sup>TM</sup>) that Fairchild has newly developed and designed to provide very compact and optimized performance for the sustaining circuit of PDP driving system. It contains HVICs, buffers and low-loss high speed IGBTs that are needed to compose the sustaining circuits. Under voltage lock-out protection function enhances the system reliabilty. The high speed built-in HVIC provides optocoupler-less single power supply IGBT gate driving capability that further reduce the overall system size of PDP and the buffer provides high current driving capability of IGBTs.
