GTLP2T152 2-Bit LVTTL/GTLP Transceiver

General Description

The GTLP2T152 is a 2-bit transceiver that provides LVTTLto-GTLP signal level translation. Data directional control is handled with a transmit/receive pin. High-speed backplane operation is a direct result of GTLP's reduced output swing (<1V), reduced input threshold levels and output edge rate control. The edge rate control minimizes bus-settling time. GTLP is a Fairchild Semiconductor derivative of the Gunning Transistor logic (GTL) JEDEC standard JESD8-3.

Fairchild's GTLP has internal edge-rate control and is process, voltage and temperature compensated. GTLP's I/O structure is similar to GTL and BTL but offers different output levels and receiver threshold. Typical GTLP output voltage levels are: $V_{OL} = 0.5V$, $V_{OH} = 1.5V$, and $V_{REF} = 1V$.

Features

Bidirectional interface between GTLP and LVTTL logic levels

June 2001

Revised February 2002

- Designed with edge rate control circuitry to reduce output noise on the GTLP port
- V_{REF} pin provides external supply reference voltage for receiver threshold adjustibility
- Special PVT compensation circuitry to provide consistent performance over variations of process, supply voltage and temperature
- TTL compatible driver and control inputs
- Designed using Fairchild advanced BiCMOS technology
 Bushold data inputs on A port to eliminate the need for
- external pull-up resistors for unused inputs Power up/down and power off high impedance for live
- insertion
- Open drain on GTLP to support wired-or connection
- Flow through pinout optimizes PCB layout
- A Port source/sink -24mA/+24mA
- B Port sink +50mA

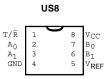

Ordering Code:

Order Number	Package Number	Package Description
GTLP2T152M	M08A	8-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow [TUBE]
GTLP2T152MX	M08A	8-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow [TAPE and REEL]
GTLP2T152K8X	MAB08A (Preliminary)	8-Lead US8, JEDEC MO-187, Variation CA 3.1mm Wide [TAPE and REEL]

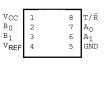

Pin Descriptions

Pin Names	Description		
T/R	LVTTL Direction Control (Receive Direction is Active LOW)		
V_{CC} , GND, V_{REF}	Device Supplies		
A _n	A Port LVTTL Input/Output		
B _n	B Port GTLP Input/Output

SOIC

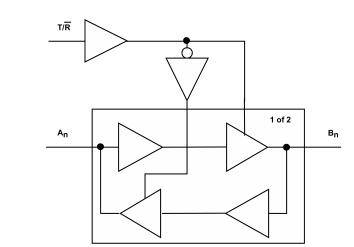

Functional Description

The GTLP2T152 is a 2-bit transceiver that supports GTLP and LVTTL signal levels. Data polarity is non-inverting and the the GTLP/LVTTL outputs are controlled by the T/R pin.

DC Electrical Characteristics (Continued)

Min Тур Max Symbol **Test Conditions** Units (Note 3) A Port $V_{CC} = 3.45V$ $V_{O} = 0V$ I_{OZL} -10 μΑ $V_{O} = 0V$ B Port -5 V_{CC} = 0 to 1.5V All Ports $V_{I} = 0$ to 3.45V 30 μΑ I_{PU/PD} I_{CC} A Port $V_{CC} = 3.45V$ Outputs HIGH 11 Outputs LOW or B Port $I_0 = 0$ 11 mΑ Outputs Disabled $V_I = V_{CC}/V_{TT} \text{ or } GND$ 11 $V_{CC} = 3.45V,$ A Port and One Input at V_{CC} 2 ΔI_{CC} mA (Note 5) Control Pins A or Control Inputs at V_{CC} or GND -0.6V Ci Control Pins $V_I = V_{CC} \text{ or } 0$ 3 pF C_{I/O} A Port $V_I = V_{CC} \text{ or } 0$ 5 pF B Port 5.5 $V_I = V_{TT}$ or 0 pF

Note 3: All typical values are at V_{CC} = 3.3V and T_A = 25°C.

Note 4: For conditions shown as Min, use the appropriate value specified under recommended operating conditions.

Note 5: This is the increase in supply current for each input that is at the specified TTL voltage level rather than V_{CC} or GND.

Note: GTLP V_{REF} and V_{TT} are specified to 2% tolerance since signal integrity and noise margin can be significantly degraded if these supplies are noisy. In addition, V_{TT} and R_{TERM} can be adjusted beyond the recommended operating to accommodate backplane impedances other than 50 Ω , but must remain within the boundaries of the DC Absolute Maximum Ratings. Similarly, V_{REF} can be adjusted to optimize noise margin.

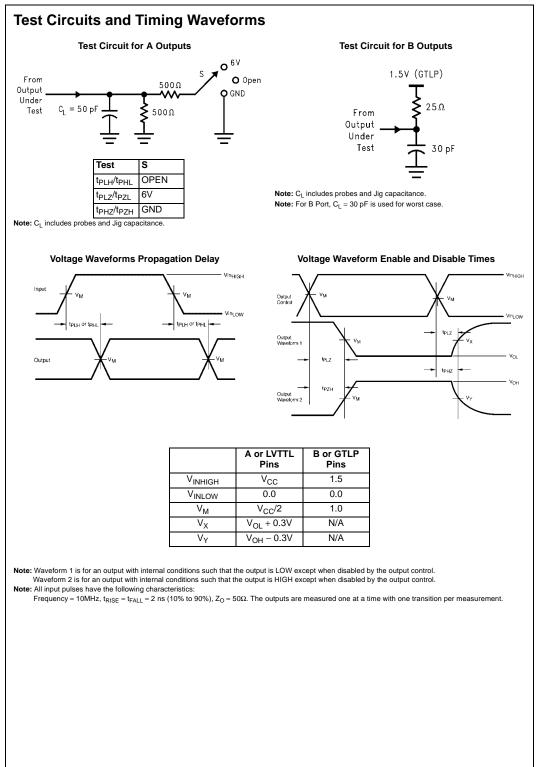

AC Electrical Characteristics

Over recommended range of supply voltage and operating free-air temperature, $V_{REF} = 1.0V$ (unless otherwise noted).

 $C_L=30\ pF$ for B Port and $C_L=50\ pF$ for A Port.
