USB1T11A Universal Serial Bus Transceiver

General Description

The USB1T11A is a one chip generic USB transceiver. It is designed to allow 5.0V or 3.3V programmable and standard logic to interface with the physical layer of the Universal Serial Bus. It is capable of transmitting and receiving serial data at both full speed (12Mbit/s) and low speed (1.5Mbit/s) data rates.

The input and output signals of the USB1T11A conform with the "Serial Interface Engine". Implementation of the Serial Interface Engine along with the USB1T11A allows the designer to make USB compatible devices with off-theshelf logic and easily modify and update the application.

Features

- Complies with Universal Serial Bus specification 1.1
- Utilizes digital inputs and outputs to transmit and receive USB cable data
- Supports 12Mbit/s "Full Speed" and 1.5Mbit/s "Low Speed" serial data transmission
- Compatible with the VHDL "Serial Interface Engine" from USB Implementers' Forum
- Supports single-ended data interface
- Single 3.3V supply
- ESD Performance: Human Body Model > 9.5 kV on D-, D+ pins only
- > 4 kV on all other pins
- 16-lead Pb-Free MLP package saves space
