SPECIFICATIONS

Ac Input

90-264 Vac, 47-63 Hz single phase.

Input Current

Maximum input current at minimum 120 Vac, 60 Hz with full rated output load is 0.6 A.

Hold-up Time

15 ms minimum from loss of ac input at full load, nominal line (120 Vac).

Normal continuous output power is 25 W, 28 W peak for 60 sec. maximum duration, 10% duty cycle. Factory set to begin power limiting at approximately 30 W.

Output Regulation

Regulation from initial setpoint measured by changing load from 5% load to 50% load or 50% load to full load in either direction. Initial setpoint tolerance is measured at 50% load. A minimum load of 5% of the output current on the +5.1 V output (125 mA) is required to maintain proper regulation.

Overload Protection

Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit

Output Noise

0.5% rms, 1% pk-pk, 20 MHz bandwidth, differential mode. Measured with scope probe directly across output terminals of the power supply with load terminated with 0.1 uF capacitor.

Transient Response

Main output: 750 μ s typical response time for return to within 0.5% of final value for a 50% load step within the regulation limits of minimum and maximum load, ΔI/Δt <0.2 A/μs. Maximum voltage deviation is 3.5%. Startup/shutdown overshoot less than 2%.

Overvoltage Protection

Built in with firing point set per ratings table. OVP firing reduces voltage to less than 50% of nominal voltage in 50 ms.

Voltage Adjustment

Factory set with fixed resistors to maximize reliability.

70% minimum at full rated load, nominal input voltage.

Input Protection

Internal ac fuse provided on all units.

Inrush Current

Inrush is limited by internal thermistor. The inrush at 230 Vac. averaged over the first ac half-cycle under cold start conditions will not exceed 32 A.

Temperature Coefficient

0.03%/°C typical on all outputs.

Environmental

Designed for 0 to 50°C operation at full rated output power; derate output current and total output power by 2.5% per °C between 50 - 70°C. See Environmental and Packaging Specifications on next page.

EMI/EMC Compliance

All models include built-in EMI filtering to meet the following emissions requirements:

COMPLIANCE LEVEL
EN55022 Class B; FCC Class B
EN55011 Class B; FCC Class B
EN61000-4-2, 6 kV contact, 8 kV air
EN61000-4-3, 3 V/meter
EN61000-4-4, 2 kV, 5 kHz
EN61000-4-5, 1 kV diff., 2 kV com.

Commercial Safety:

Condor D.C. Power Supplies, Inc. declares under our sole responsibility that all GSC models are in conformity with the applicable requirements of EN60950 following the provisions of the Low Voltage Directive 73/23/EEC. All GSC models are approved to UL1950, CSA-C22.2 No.950, EN60950.

GSM25 Medical Model Earth Leakage Current

Leakage current measured in the Gnd wire connection when measured per UL2601-1 or IEC60601-1 is as follows:

Model	Normal Leakage	Fault Leakage	Test Voltage	Test Method
GSM25	50 μΑ	78 μΑ	132 Vca/60 Hz	UL2601-1
GSM25	94 μΑ	150 μΑ	264 Vca/50 Hz	IEC60601-1

Medical Safety

Condor D.C. Power Supplies, Inc. declares under our sole responsibility that all GSM models are in conformity with the applicable requirements of UL2601-1 Patient Care Equipment, CSA-C22.2 No.601.1, IEC60601-1, EN 60601-1.

- A. To maintain proper regulation on output 2, +5.1 V current must be at least 1/4 and not greater than 5 times V2 current. V1 must be adjusted within 1% of 5.1 V to maintain full load regulation on V2.
- B. Thermal foldback type current limit
- C. Add "G" suffix to model number for RoHS compliant model.
